Surface-Functionalized Ceramics Laura Treccani, Fabian Meder, 2022-12-12 Surface Functionalized Ceramics Focused coverage of making and using functional ceramic materials for a wide variety of scientific and technical applications Surface Functionalized Ceramics provides a comprehensive overview of surface functionalization approaches for ceramic materials including alumina zirconia titania and silica and their uses as sensors chemical and biological probes chromatographic supports for bio molecule purification and analysis and adsorbents for toxic substances and pollutants Overall the text provides a broad picture of the enormous possibilities offered by surface functionalization and addresses the current challenges regarding surface analysis characterization and stability As a well rounded resource the text points out opportunities of surface functionalized ceramics their issues such as achieving surface stability and complex analysis and how to counter them Edited by two experts in the field of advanced materials surfaces Surface Functionalized Ceramics covers topics such as Processing methods for advanced ceramics surface modification of ceramic materials and methods for electrokinetic surface characteristics Surface imaging and chemical surface analysis using atomic force microscopy Surface chemical analysis and ceramic enhanced analytics Biological and living matter surface interactions including protein adsorption mechanisms as well as bacteria behavior in terms of biofilm formation and prevention for antibacterial applications Mesoporous silica and organosilica biosensors for water quality and environmental monitoring plus ceramic based adsorbents in bioproduct recovery and purification For professionals researchers and academics in the fields of materials science biotechnology biotechnological industry environmental sciences and ceramics industry Surface Functionalized Ceramics is a one stop reference on the subject that provides different approaches to obtain surfaces of ceramic materials that perform desired functions

Mathematics of Space George Legendre, 2011-08-29 A new title in the Architectural Design series that explores the potential of computational mathematics in cutting edge design Mathematics has always been a vital tool in the architect s trade but the last fifteen years have seen a sharp rise in the power of computers and has led to computational abilities far beyond anything previously available Modern design software and computing power have changed the traditional role of geometry in architecture and opened up new possibilities enabled by topology non Euclidean geometry and other areas of mathematics With insight from a top notch list of contributors including such notables as Philippe Morel and Fabien Scheurer Mathematics in Space discusses how the advent of computation and information technology has affected the work of contemporary architects This new title in the Architectural Design series updates architectural mathematics since the digital revolution With world class contributors this is an essential resource for anyone interested in the ways computation has transformed the discipline The book explores fascinating issues in modern design most importantly the impact of mathematics on contemporary design creativity For students and practitioners alike Mathematics in Space covers vital topics in a constantly changing discipline

Electroceramics in Japan XVI N.

Murayama,K. Shinozaki,T. Mizoguchi,2013-09-10 Selected peer reviewed papers from the 32nd Electronics Division Meeting of the Ceramic Society of Japan October 26 27 2012 Tokyo Japan **Surface and Colloid Science in Computer Technology** Kashmiri Lal Mittal,2012-12-06 Ijp George Liaropoulos-Legendre,2003 At a time when architectural discourse and practice are brimming with references to new geometries ijp turns its back on the habitual perception of the 3D surface as a photosensitive colourful and somewhat mystifying expanse Instead this experimental text approaches its subject through a joint meditation on abstraction figuration performance symbology and form elaborated in parallel venues including theoretical essays on the literal and metaphoric meaning of superficial statements of computer programming syntax recipes printouts of data streams indexical poetry mathematical asides and descriptions of numerically controlled fabrication processes all of which offer alternative descriptions of the very same thing the surface as object of knowledge A rigorous typographic treatment enhanced by custom programmed graphics stylizes the most technical side of these various threads and weaves them into a coherent narrative for nonspecialists Organic Thin Film Transistor Integration Flora Li,Arokia Nathan,Yiliang Wu,Beng S. Ong,2011-03-21 Research on organic electronics or plastic electronics is driven by the need to create systems that are lightweight unbreakable and mechanically flexible With the remarkable improvement in the performance of organic semiconductor materials during the past few decades organic electronics appeal to innovative practical and broad impact applications requiring large area coverage mechanical flexibility low temperature processing and low cost Thus organic electronics appeal to a broad range of electronic devices and products including transistors diodes sensors solar cells lighting displays and electronic identification and tracking devices A number of commercial opportunities have been identified for organic thin film transistors OTFTs ranging from flexible displays electronic paper radio frequency identification RFID tags smart cards to low cost disposable electronic products and more are continually being invented as the technology matures The potential applications for plastic electronics are huge but several technological hurdles must be overcome In many of these applications transistor serves as a fundamental building block to implement the necessary electronic functionality Hence research in organic thin film transistors OTFTs or organic field effect transistors OFETs is eminently pertinent to the development and realization of organic electronics This book presents a comprehensive investigation of the production and application of a variety of polymer based transistor devices and circuits It begins with a detailed overview of Organic Thin Film Transistors OTFTs and discusses the various possible fabrication methods reported so far This is followed by two major sections on the choice optimization and implementation of the gate dielectric material to be used Details of the effects of processing on the efficiency of the contacts are then provided The book concludes with a chapter on the integration of such devices to produce a variety of OTFT based circuits and systems The key objective is to examine strategies to exploit existing materials and techniques to advance OTFT technology in device performance device manufacture and device integration Finally the collective knowledge from these investigations facilitates the integration of

OTFTs into organic circuits which is expected to contribute to the development of new generation of all organic displays for communication devices and other pertinent applications Overall a major outcome of this work is that it provides an economical means for organic transistor and circuit integration by enabling the use of a well established PECVD infrastructure while not compromising the performance of electronics The techniques established here are not limited to use in OTFTs only the organic semiconductor and SiNx combination can be used in other device structures e g sensors diodes photovoltaics Furthermore the approach and strategy used for interface optimization can be extended to the development of other materials systems

Surface Application of Paper Chemicals J. Brander,I. Thorn,1997-09-30

With the exception of a slight hiccup during the height of the recent environmental movement during the early 1990s when for a year or two consumers were prepared to pay a price premium for lower quality recycled paper than for the virgin product the inexorable improvement in the quality demanded of paper products continues This demand for quality covers not only the aesthetics of the product but also its performance Moreover it is becoming increasingly the case that papers designed for a particular use must as it were incidentally also perform well in alternative applications An example is that of office and printing papers which are expected to perform as well in copier machines as in all the various forms of impact and non impact printers But even greater demands are made in other product areas where board designed for dry foods can also be expected to protect moist and fatty materials and be made of 100% recycled fibre The need to isolate foodstuffs from some of the contaminants that can affect recycled board is a serious challenge Thus papermakers are constantly striving to meet a broadening spectrum of demands on their products often while accepting declining quality of raw materials The product design philosophy that has arisen in response to this is increasingly to isolate the bulk of a paper from its uses to engineer the needed performance characteristics into the paper surfaces while more or less ignoring what happens inside
