of telecommunication operators is continuously being affected by the intensifying struggle between operators. These aspects do not only involve an increasing saturation within the communications market but also contribute to a rising substitution behavior triggered by well established Internet businesses. In this context the Ovum Global Telecoms Market Outlook 2013-2018 predicts for the coming five years a global increase of mobile lines of about 25% e.g. 8.1 billion in total by 2018, the relevant growth coming primarily from emerging economies. However, the outlook for the fixed network market does not look that promising, a 5% reduction in voice revenues for the period 2012-2018 is expected. Other important features that influence the economic achievement of a telecommunications provider are represented by the current regulatory provisions along with the price level the provider can realize. Obviously, this price level generally mirrors the customer behavior and the development stage of a particular market. In this sense, the mobile industry has certainly the potential to set free even superior benefits and contribute to meet the EU sustainability and innovation targets defined in the EU 2020 strategy 14. In fact, the European mobile industry is no longer restricted to the provision of basic voice and data services but is rather taking to an active role in offering high speed broadband access and data connectivity. This involves a new third wave of connectivity e.g. beyond tablets and laptops comprising cars and buildings and having undoubtedly the prospect of connecting almost anything and anyone, the Connected Life as the GSMA denotes it.
