**Innovations in the assessment and treatment of TBI and co-occurring conditions in military connected populations** Jay M. Uomoto, Chandler Rhodes, Jesse R. Fann, 2026-02-03 This research topic aims to explore and highlight innovative approaches for assessing and treating Traumatic Brain Injury TBI and its associated conditions among military connected populations. Such TBIs can occur in combat theatre during training and off duty TBIs often result in a wide range of physical neurological psychological and behavioral disorders. The complexity in assessing and treating the aftereffects of TBI increases when they are associated with other co morbidities such as post traumatic stress disorder PTSD chronic pain headaches neuroendocrine changes sleep disorders fatigue and other medically unexplained symptoms. Treating the aftereffects of TBI in a military setting therefore presents unique challenges due to co occurring conditions and the impact of factors like combat stress and blast wave exposures. Key areas of interest for this exploration include Understanding the distinctive challenges in assessing and treating TBI and co morbidities in military populations The adaptation of Evidence Based Treatments EBTs to address the unique needs and challenges faced by military personnel Evaluating the current modes of assessment and treatment while identifying areas that require more innovative approaches Exploring the development and use of technological advancements including AI and machine learning in diagnosing and treating TBI PTSD and other related conditions Examining the effectiveness of combined therapeutic strategies such as pharmacological and non pharmacological treatments for TBI s comprehensive management Investigating the role and adaptation of mindfulness based therapies Acceptance and Commitment Therapy Dialectical Behavior Therapy Creative Arts Therapies and other innovative approaches and their impact on patient outcomes Understanding the role of placebo and nocebo effects safety and efficacy concerns the concept of clinical equipoise and other bioethical dilemmas in relation to novel or innovative treatments for military related TBI Exploring multimodal evaluation of outcomes by combining self reports with neurophysiological measures such as Heart Rate Variability HRV accelerometers motion sensors as well as with neurological biomarkers such as genomics neuroimaging and blood markers Studying the use of intensive longitudinal methodologies including time series designs ecological momentary assessment and experience sampling to track treatment processes and outcomes Investigating mixed method approaches including how the integration of quantitative and qualitative data analysis can provide a more comprehensive understanding of TBI and related conditions Through this research we aim to push the boundaries of traditional diagnostic and therapeutic approaches seeking improved methods of dealing with TBI and its co occurring conditions in military settings The ultimate goal is to enhance the quality of life and healthcare outcomes for military personnel worldwide We are happy to accept submissions of original research and review papers on this important and vast

research area
