Beginners introduces you to the basics of NX by using step by step instructions You begin with a brief introduction to NX and
the User Interface ribbon environments commands and various options Within a short time you will learn to create 2D
sketches that form the basis for 3D models You will learn to sketch on three different planes Front Top and Right planes You
will use various sketching tools such as line rectangle and circle You will also learn to modify sketches using tools such as
trim extend and fillet Learn to use geometric constraints and dimensions to achieve a definite shape and size of the sketch
You convert the sketches into 3D features such as Extrude and Revolve You combine or subtract features to achieve the final
part You can also add placed features sketch fewer features such as Fillets and Holes to the 3D geometry You explore
mirroring and patterning commands to create repetitive features You will learn to use some additional modeling tools and
work with multi body parts Learn to modify part geometry by editing sketches and feature parameters You explore
Synchronous Modeling tools to change the Part geometry by modifying its faces You build assemblies after creating parts
There are two methods to build assemblies Bottom up and Top down In the Bottom up approach you bring all the components
together and add constraints between them In the Top down approach you create parts at the assembly level You explode
assemblies to show how they were assembled You create Drawings of the parts and assemblies You insert part views and add
dimensions and annotations to complete the drawing In the case of assembly drawings you insert assembly views add Bill of
Materials Balloons and Revision table The Sheet Metal design chapter covers various tools used to build sheet metal parts
from scratch You will also learn to convert an existing part geometry into a sheet metal part You also create flat patterns and
