

Running the Game of Life Simulation

Now run the code:

```
1 python Conway.py
```

This uses the default parameters for the simulation: a grid of 100x100 cells and an update interval of 50 milliseconds. As you watch the simulation, you'll see how it progresses to create and sustain various patterns over time, as in Figure 3-4 (a) and (b).

Figure 3-4: The Game of Life in progress

Figure 3-5 shows some of the patterns to look for in the simulation. Besides the glider, look for a three-cell blinker and static patterns such as a block or loaf shape.

Figure 3-5: Some patterns in the Game of Life

Now change things up a bit by running the simulation with these parameters:

```
1 python Conway.py --grid-size 20 --interval 100 --glider
```

This creates a simulation grid of 20x20, updates the animation every 100 milliseconds, and uses the initial glider pattern shown in the bottom right of Figure 3-5.

Summary

In this project, you explored Conway's Game of Life. You learned how to set up a basic computer simulation based on some rules and how to use `matplotlib` to visualize the state of the system as it evolves.

My implementation of Conway's Game of Life emphasizes simplicity over performance. You can speed up the computations in the Game of Life in many different ways, and a tremendous amount of research has been done on how to do this. You'll find a lot of this research through a quick internet search.

Experiments

Here are some ways to experiment further with Conway's Game of Life:

1. Write an `initialize()` method to add the patterns shown in Figure 3-5 to the grid. This pattern is called the *Conway Glider Gun*. Run the simulation and observe what the gun does.

Figure 3-6: The Conway Glider Gun

2. Write a `readPattern()` method that reads in an initial pattern from a text file and uses it to set the initial conditions for the simulation. You can use Python methods such as `open` and `File.read` to do this. Here's a suggested format for the input file:

```
0
0 0 0 255...
```

The first line of the file defines N , and the rest of the file is just $N \times N$ integers (0 or 255) separated by whitespace. This explanation will help
