End-to-End Quality of Service Abdelhamid Mellouk, 2009-01-20 A modern communication network can be described as a large complex distributed system composed by

higher interoperating smaller sub systems Today the proliferation and convergence of different types of wired wireless and mobile networks are crucial for the success of the next generation networking However these networks can hardly meet the requirements of future integrated service networks and are expected to carry multimedia traffic with various Quality of Experience QoE and Quality of Service QoS requirements Providing all relevant QoS QoE issues in these heterogeneous networks is then an important challenge for telecommunication operators manufacturers and companies The impressive emergence and the important demand of the rising generation of real time Multi service such as Data Voice VoD Video Conference etc over communication heterogeneous networks require scalability while considering a continuous QoS This book presents and explains all the techniques in new generation networks which integrate efficient global control mechanisms in two directions 1 maintain QoS requirements in order to maximize network resources utilization and minimize operational costs on all the types of wired wireless mobile networks used to transport traffic and 2 mix the QoS associated with home access and core networks in order to provide Quality of Service Quality of Experience expected by users of new services
