Debus, 2024-10-04 The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago This startling announcement captivated the media and tilted the science fiction world but in reality history may have been punctuated repeatedly by such events This

book collects and analyzes ideas of asteroid comet and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci fi stories films and televised science documentaries The author examines social and geopolitical fears tied to the prospect of a cosmic borne catastrophe Science fiction and speculation are artfully melded **The Planetary Report**, 1993 **Ice** Mariana Gosnell, 2011-04-27 Like the adventurer who circled an iceberg to see it on all sides Mariana Gosnell former Newsweek reporter and author of Zero Three Bravo a book about flying a small plane around the United States explores ice in all its complexity grandeur and significance More brittle than glass at times stronger than steel at other times flowing like molasses ice covers 10 percent of the earth s land and 7 percent of its oceans In nature it is found in myriad forms from the delicate needle ice that crunches underfoot in a winter meadow to the massive centuries old ice that forms the world s glaciers Scientists theorize that icy comets delivered to Earth the molecules needed to get life started and ice ages have shaped much of the land as we know it Here is the whole world of ice from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring from the frozen Antarctic landscape that emperor penguins inhabit to the cold watery route bowhead whales take between Arctic ice floes Mariana Gosnell writes about frostbite and about the recently discovered 5 000 year old body of a man preserved in an Alpine glacier She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth s climate and try to predict its future She examines ice in plants icebergs icicles and hail sea ice and permafrost ice on Mars and in the rings of Saturn and several new forms of ice developed in labs She writes of the many uses humans make of ice including ice skating ice fishing iceboating and ice climbing building ice roads and seeding clouds making ice castles ice cubes and iced desserts Ice is a sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in It is a pleasure to read and important to read for its natural science and revelations about ice s influence on our everyday lives and for what it has to tell us about our environment today and in the future
