**Inertia Is Gravity** Guy Cavet Myhre, 2004-12 Physicists and laypersons alike rejoice The crumbling 75 year old flawed foundation of quantum physics methodology is facing its imminent coup de grace to be replaced by a new wholly rational foundation Myhre's essay fires the first shot which renders current physics textbooks instantly obsolete Really He begins with many insightful discoveries the oldest of which dates from a half century ago when he was a USAF pilot It is about the great importance of inertia in our lives of how it determines the size of our atoms and the rate of our aging and of how Myhre eventually discovered that the number 137 is closely associated with inertia he speculates that the magnitude of inertial force varies throughout the Universe and that it is 137 times greater in the vicinity of the Solar System than at a location in the Universe where it is at a minimum pretty heady stuff yet his arguments backed by mathematical equations are quite convincing Later he made the all important discovery of the quantum attributes of elementary particles which when used as units of measure make the universal physical constants literally vanish from quantum based equations This simplification of a main aspect of quantum physics lead Myhre to discover other heretofore unknown aspects of our physical environment for example the simple but elegant linkage between electromagnetic and gravitational force the realization of the beginning of a quantum gravity model the fine structure constant's correct definition the role of updated Planck values in determining the possible existence of an elementary particle of matter that is mediated by the graviton new more rational equations about gravitational phenomena using the quantum attributes of the hypothetical elementary particle of matter as units of measure and many more When Myhre retired he decided to expose to the world the great truths about our quantum world that he has discovered over the decades During that time he kept most of his discoveries to himself because his family friends and associates not being part of the physical community and therefore not in the know would neither appreciate his discoveries nor recognize their importance With the publication of this essay Myhre hopes to prompt academic physicists to finalize the coup de grace that he has begun by continuing to develop this more coherent foundation for the methodology of quantum physics which was impossible to achieve in the late 1920s because of the lack of sufficient knowledge at that time
