

If $f_1 = f_2 = f_3$, then

AFO $\rightarrow y = mx^2$

$$\lim_{(x,y) \rightarrow (0,0)} f(x,y) = \lim_{x \rightarrow 0} f(x, mx^2) = f_y$$

If $f_1 = f_2 = f_3 \neq f_4$, then limit does not exist

||y we take infinite paths $y = mx^n, n \in \mathbb{R}$. $\frac{2}{3} \quad \frac{3}{4}$
 If in all these paths the limit is same $y = ax^{5/6}$
 then we say that the limit exists

\rightarrow check whether the limit of the following functions exist or not.

$$1) \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2}$$

$$f_1 = \lim_{x \rightarrow 0} \left[\lim_{y \rightarrow 0} \frac{x^2 y}{x^4 + y^2} \right] = \lim_{x \rightarrow 0} [0] = 0$$

$$f_2 = \lim_{y \rightarrow 0} \left[\lim_{x \rightarrow 0} \frac{x^2 y}{x^4 + y^2} \right] = \lim_{y \rightarrow 0} [0] = 0$$

Along $y = mx$ $f_3 = \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2} = \lim_{x \rightarrow 0} \frac{x^2(mx)}{x^4 + m^2 x^2} = \frac{m x^3}{x^2(1+m^2)} = 0$

Along $y = mx^2$ $f_4 = \lim_{(x,y) \rightarrow (0,0)} \frac{x^2 y}{x^4 + y^2} = \lim_{x \rightarrow 0} \frac{x^2 m x^2}{x^4 + m^2 x^4} = \lim_{x \rightarrow 0} \frac{m x^4}{x^4(1+m^2)} = \frac{m}{1+m^2}$

$m=1, y=x^2 \rightarrow \frac{1}{1+1} = \frac{1}{2}$
 $m=2, y=2x^2 \rightarrow \frac{1}{1+4} = \frac{1}{5}$

Along $y = x^2 \rightarrow \frac{1}{2}$
 $y = 2x^2 \rightarrow \frac{1}{5}$

for different values of m we get different limits
 Hence the function does not have limit at $(0,0)$.

2) $\lim_{(x,y) \rightarrow (0,0)} \frac{y^2 - x^2}{x^2 + y^2} \rightarrow$ limit does not exist

$$\lim_{x \rightarrow 0} \frac{x^3 - (mx^3)^3}{x^2 + (mx^3)^2} = \lim_{x \rightarrow 0} \frac{x^3 - m^3 x^9}{x^2 + m^2 x^6} = \lim_{x \rightarrow 0} \frac{x(1 - m^3 x^6)}{1 + m^2 x^4} = 0$$

3) $\lim_{(x,y) \rightarrow (0,0)} \frac{x^3 - y^3}{x^2 + y^2} \rightarrow$

Multivariable Calculus Notes:

Multivariable Calculus ALEXEY. KRYUKOV,2017-09-05 This textbook is a set of lecture notes and practical exercises in Multivariable Calculus written for university students It contains all essential definitions and results typically covered in a third semester calculus course presented in a streamlined format The textbook is based on the learning principle of moving from elementary to complex Each topic begins with a straight to the point lecture introducing the main material followed by a set of carefully selected problems which develop an understanding of the material and the ability to use it A separate Solutions Manual complements this minimal yet complete set of resources needed for mastery of Multivariable Calculus by a motivated student

Multivariable Calculus ALEXEY. KRYUKOV,K. Berg,2017-09-05 This Solutions Manual contains solutions to all typical problems in the textbook Multivariable Calculus Lecture Notes ISBN 13 978 1976146374 This step by step solution guide is a great compliment to the Lecture Notes and allows the motivated student to truly master problem solving techniques in Multivariable Calculus in a fast and efficient way

MAA Notes ,1983 *Mathematical Engineering of Deep Learning* Benoit Lique,Sarat Moka,Yoni Nazarathy,2024-10-03 Mathematical Engineering of Deep Learning provides a complete and concise overview of deep learning using the language of mathematics The book provides a self contained background on machine learning and optimization algorithms and progresses through the key ideas of deep learning These ideas and architectures include deep neural networks convolutional models recurrent models long short term memory the attention mechanism transformers variational auto encoders diffusion models generative adversarial networks reinforcement learning and graph neural networks Concepts are presented using simple mathematical equations together with a concise description of relevant tricks of the trade The content is the foundation for state of the art artificial intelligence applications involving images sound large language models and other domains The focus is on the basic mathematical description of algorithms and methods and does not require computer programming The presentation is also agnostic to neuroscientific relationships historical perspectives and theoretical research The benefit of such a concise approach is that a mathematically equipped reader can quickly grasp the essence of deep learning Key Features A perfect summary of deep learning not tied to any computer language or computational framework An ideal handbook of deep learning for readers that feel comfortable with mathematical notation An up to date description of the most influential deep learning ideas that have made an impact on vision sound natural language understanding and scientific domains The exposition is not tied to the historical development of the field or to neuroscience allowing the reader to quickly grasp the essentials Deep learning is easily described through the language of mathematics at a level accessible to many professionals Readers from fields such as engineering statistics physics pure mathematics econometrics operations research quantitative management quantitative biology applied machine learning or applied deep learning will quickly gain insights into the key mathematical engineering components of the field

Linear Algebra and Differential Equations Alexander Givental,2001 The material presented in this book corresponds

to a semester long course Linear Algebra and Differential Equations taught to sophomore students at UC Berkeley In contrast with typical undergraduate texts the book offers a unifying point of view on the subject namely that linear algebra solves several clearly posed classification problems about such geometric objects as quadratic forms and linear transformations This attractive viewpoint on the classical theory agrees well with modern tendencies in advanced mathematics and is shared by many research mathematicians However the idea of classification seldom finds its way to basic programs in mathematics and is usually unfamiliar to undergraduates To meet the challenge the book first guides the reader through the entire agenda of linear algebra in the elementary environment of two dimensional geometry and prior to spelling out the general idea and employing it in higher dimensions shows how it works in applications such as linear ODE systems or stability of equilibria Appropriate as a text for regular junior and honors sophomore level college classes the book is accessible to high school students familiar with basic calculus and can also be useful to engineering graduate students

Calculus 3 Lecture Notes Workbook Blake Thornton,2023-08-03 This workbook covers the third semester of a traditional calculus course Multivariable Calculus The workbook follows the chapters in Stewart s Calculus and can be used as a supplement to Stewart or as a stand alone workbook Topics covered include lines planes graphing curves partial derivatives multiple integrals change of variables vector fields and vector calculus **Recountings** Joel Segel,2009-01-03 This book traces the history of the MIT Department of Mathematics one of the most important mathematics departments in the world through candid in depth lively conversations with a select and diverse group of its senior members The process reveals much about the motivation path and impact of research mathematicians in a society that owes so mu

Mathematical Computing David Betounes,Mylan Redfern,2012-12-06 This book is designed to teach introductory computer programming using Maple It aims to infuse more mathematically oriented programming exercises and problems than those found in traditional programming courses while reinforcing and applying concepts and techniques of calculus All the important basic elements of computer programming can be easily learned within the interactive and user friendly environment of a Computer Algebra System CAS such as Maple Most chapters feature case studies that provide greater depth on some topics and also serve to illustrate the methodology of analysis and design of code for more complex problems This book is directed at undergraduates in the fields of math science or secondary education Teach Students How to Learn Saundra Yancy McGuire,2023-07-03 Co published with NISOD Miriam a freshman Calculus student at Louisiana State University made 37 5% on her first exam but 83% and 93% on the next two Matt a first year General Chemistry student at the University of Utah scored 65% and 55% on his first two exams and 95% on his third These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book What is preventing your students from performing according to expectations Saundra McGuire offers a simple but profound answer If you teach students how to learn and give them simple straightforward strategies to use they can significantly increase their learning

and performance For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success This book encapsulates the model and ideas she has developed in the past fifteen years ideas that are being adopted by an increasing number of faculty with considerable effect The methods she proposes do not require restructuring courses or an inordinate amount of time to teach They can often be accomplished in a single session transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement First she demonstrates how introducing students to metacognition and Bloom s Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth Next she presents a specific study system that can quickly empower students to maximize their learning Then she addresses the importance of dealing with emotion attitudes and motivation by suggesting ways to change students mindsets about ability and by providing a range of strategies to boost motivation and learning finally she offers guidance to faculty on partnering with campus learning centers She pays particular attention to academically unprepared students noting that the strategies she offers for this particular population are equally beneficial for all students While stressing that there are many ways to teach effectively and that readers can be flexible in picking and choosing among the strategies she presents Sandra McGuire offers the reader a step by step process for delivering the key messages of the book to students in as little as 50 minutes Free online supplements provide three slide sets and a sample video lecture This book is written primarily for faculty but will be equally useful for TAs tutors and learning center professionals For readers with no background in education or cognitive psychology the book avoids jargon and esoteric theory Teach Yourself How to Learn Sandra Yancy McGuire,2023-07-03 Following up on her acclaimed Teach Students How to Learn that describes teaching strategies to facilitate dramatic improvements in student learning and success Sandra McGuire here presents these secrets direct to students Her message is that Any student can use simple straightforward strategies to start making A s in their courses and enjoy a lifetime of deep effective learning Beginning with explaining how expectations about learning and the study efforts required differ between college and secondary school the author introduces her readers through the concept of metacognition to the importance and powerful consequences of understanding themselves as learners This framework and the recommended strategies that support it are useful for anyone moving on to a more advanced stage of education so this book also has an intended audience of students preparing to go to high school graduate school or professional school In a conversational tone and liberally illustrated by anecdotes of past students the author combines introducing readers to concepts like Bloom s Taxonomy to illuminate the difference between studying and learning fixed and growth mindsets as well as to what brain science has to tell us about rest nutrition and
