among them providing food to an ever growing number of people on our planet. If at the beginning of the twentieth century the population of the Earth was 1.5 billion people, today it has exceeded 7.6 billion. This situation requires a further increase in productivity in the agricultural sector, which in the context of the application of traditional technologies has led to the intensive use of fertilizers and pesticides that saturate the soil with unsafe chemicals. Due to climate change, vast areas set aside for agriculture suffer from drought. Genetically modified products cannot fully provide for the consumer market, and their effect on our body cannot be considered fully understood. All these factors confirm the need to search for new, more effective methods of growing crops, one of which is hydroponics.

The history of the emergence of hydroponics is associated with centuries of research by scientists, as a result of which a huge number of experiments were carried out that made it possible to determine the optimal, balanced nutritional composition to ensure the vital activity of plants. As it turned out, the soil environment for crops is not necessary, and the most important elements in their nutrition are now known. Plants successfully grow and develop if their root system is in contact with an aqueous medium containing all the necessary substances. This fact became fundamental for the development of hydroponics as a new method of crop production.

I am certain that you will want to learn about this idea of the future. The leaders in this area are countries such as the Netherlands, France, Great Britain, Israel, Canada, and Australia, where for several decades experiments have been carried out to search and develop more advanced methods of soilless cultivation that are adapted to local conditions and meet certain requirements of the consumer market. With respect to planting without soil, whether for business, for personal consumption, for leisure, or for aesthetic purposes, this book holds in it all the details you need. Even if you have an idea of hydroponic systems, the totalistic nature of the content in this book will provide you with more than several good ideas that you can and should be using. grown on soil this is because they would not have to go through a lot of disadvantages that the soil may present such as situations of a break out of a soil borne disease in the area the struggle to have to push its way through the soil during germination the attack from organism and pests that live in the soil And of course the plants in hydroponic systems do not have to hustle for nutrients and water because this is basically what they are planted in in hydroponic systems water based mineral nutrient solutions Hydroponics also helps you save water which sounds a bit strange when you think of water is essential for this process Usually it s every alternate day so that the soil soaks up the water and is transported to the roots That sounds fine doesn t it But that s only a portion of the big picture Some of the water is bound to seep out of the container some of it evaporates and a portion of it seeps further into the soil beyond the plant s roots So in practice the plant essentially only uses up a small portion of the water Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots It means that the portion of water that isn t absorbed by the plant is directly sent to the reservoir The same water from the reservoir is later pumped up to the plants Since the reservoir is shut tight there is no chance for the water to evaporate and it certainly will not seep out of the bottom of the container You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening This book covers the following topics Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More Do not get scared hydroponic gardening is not as complicated tricky and demanding as your mind is about to convince you that it is on the contrary it is very simple And this is what this book is about to enlighten you and get you started on having your own hydroponic garden Ready to get started Click Buy Now *Hydroponics for Beginners and Advanced (2 Books in 1)* Tom Garden,2021-09-15 Learn How to Use Hydroponics to Build and Manage Your Own Garden Have you always wanted a beautiful garden right in your home Do you want to learn how to grow your own plants and vegetables HYDROPONICS ALLOWS YOU TO GROW PLANTS WITH NO SOIL OR SUNLIGHT USING SPECIAL NUTRIENT SOLUTIONS PERFECT FOR COLDER CLIMATES AND HOME GARDENS Plants need their water sun and nutrients at the right time and in the right proportions For a beautiful garden to grow in your home you may wanna check out the science of hydroponics Hydroponics enable plants to grow using adequate mineral nutrient solutions and watering regimens with full environmental control and lightening systems Sounds complicated This book will teach you all there is to know You can become a master gardener in no time and grow beautiful tomatoes and cucumbers right in your own home Maybe you want to grow orchids Have no fear Hydroponics doesn t discriminate In all situations hydroponics teaches you how to start and maintain a home wonderful garden This book will teach you about What is hydroponics and how it works Different types of hydroponic systems Various growing mediums and how to pick the best one The proper way to prepare nutrient solutions Which plants to grow and which to avoid How to stave off pests and diseases AND SO MUCH MORE Even if you ve never thought about having your own garden this book will certainly peak your
