into account the connection between 1 teacher's actions and pupils' solutions and 2 teacher's actions and pupils' affective reactions. Safe and supportive emotional atmosphere is base for students learning and attitudes towards mathematics. Teacher has a central role both in constructing emotional atmosphere and in offering cognitive support that pupils need in order to reach higher level solutions. Teachers need to use activating guidance i.e. ask good questions based on pupils' solutions. Balancing between too much and too little guidance is not easy. RESEARCH REPORTS AND ORAL COMMUNICATIONS Lukas Baumanns and Benjamin Rott Is problem posing about posing problems? A terminological framework for researching problem posing and problem solving pp 21-31. In this literature review we critically compare different problem posing situations used in research studies. This review reveals that the term problem posing is used for many different situations that differ substantially from each other. For some situations it is debatable whether they provoke a posing activity at all. For other situations we propose a terminological differentiation between posing routine tasks and posing non routine problems. To reinforce our terminological specification and to empirically verify our theoretical considerations we conducted some task based interviews with students. Kerstin Bruning Long term study on the development of approaches for a combinatorial task pp 33-50. In a longitudinal research project over two years we interviewed children up to 6 times individually to trace their developmental trajectories when they solve several times the same tasks from different mathematical areas. As a case study I will present the combinatorial task and analyze how two children a girl and a boy over two years approached it. As a result of the case studies we can see that the analysis of the data product oriented or process oriented provides different results. It is also observable that the developmental trajectory of the girl is a more continuous learning process which we cannot identify for the boy. Lars Burman Developing students problem solving skills using problem sequences. Student perspectives on collaborative work pp 51-59. Using problem solving in mathematics classrooms has been the object of research for several decades. However it is still necessary to focus on the development of problem solving skills and in line with the recent PISA assessment more attention is given to collaborative problem solving. This article addresses students collaborative work with problem sequences as a means to systematically develop students problem solving skills. The article offers student perspectives on challenges concerning the social atmosphere differentiation on teaching and learning in cooperation. In spite of the challenges the students experiences indicate that the use of problem sequences and group problem solving can be fruitful in mathematics education. Alex Friedlander Learning algebraic procedures through problem solving pp 61-69. In this paper I attempt to present several examples of tasks and some relevant findings that investigate the possibility of basing a part of the practice oriented tasks on higher level thinking skills that are usually associated with processes of problem solving. The tasks presented and analysed here integrate problem solving components namely reversed thinking expressing and analysing patterns and employing multiple solution
