

## Project Plan

**Project Name:** Minnesota Geospatial Commons – Test Implementation

**Date:** 06/07/2010 **Version:** 1.3

**Prepared By:** Mark Kotz

### A Executive Summary

#### Business Need/Opportunity

The Minnesota geospatial community has access to a large number of shared geospatial datasets, mainly through multiple data download sites. However, no one web location exists through which people and organizations can find and share such data. Shared web services and applications are even less accessible, and only modestly promoted as a potential shared resource. There exists in Minnesota a significant opportunity to collaboratively develop a single location through which published Minnesota geospatial resources can be found and shared.

Many in the community are very interested in this opportunity and have a compelling business need to see it succeed, not the least of which are the agencies that manage the biggest GIS data distribution sites in the state (DNR, Met Council, MnGeo & Mn/DOT). Further, the existence of a collaboratively developed Commons may eliminate the need for existing, disparate GIS data download sites, saving several organizations from the responsibility of maintaining their own sites and upgrading them periodically.

The coordinated geospatial commons that is envisioned would greatly advance our ability to share web services in particular, by both providing a place to publish information about them and also by facilitating assessments of the reliability and trustworthiness of such web services. The increased usage of web services will produce efficiency gains for many organizations, in particular those that develop geospatial applications.

Perhaps most importantly, the Commons will provide a one stop location for a broad array of business and GIS users in Minnesota and beyond, whether professional or casual, to find and share useful resources, and will promote greater sharing of geospatial data, services and applications.

#### Statement of Work

This effort includes the following:

- Define the needed functions of the Commons
  - Begin with those functions needed by the major data producers
  - Get additional input from the broader MN geospatial community
- Assess existing sites and products and choose a product for a test bed implementation
- Further define the critical functions and requirements (i.e. role of the broker, services documentation)
- Form a multi agency implementation team advised by the Commons workgroup
- Create and approve a project charter
- Create and approve a project plan for the test bed implementation
- Implement a test bed Commons focusing on high priority functions
- Test functionality and assess strengths and deficiencies of software product and implementation methods
- Make recommendations and project plan for a full production Commons, including
  - Roles and responsibilities
  - Functions to include
  - Implementation methods
  - Timeline
