

Frictions

When using two knot systems, before reaching the rope during the active phase I came across the problem. When continuously sliding I saw knots for stabilization on simple ways.

These ways don't have an official name, but the result is the same that I did in the workshop in "Workshop".

Frictions rely on the rope's tendency to grip adjacent rope, so friction rope can prevent slip or slide, especially to stabilize the system. Frictions work that stabilize and good for stabilize ropes that tend to be difficult to work. Using the friction system and different friction, and some change that can be used.

When it's included in the simple system, when starting the system, remember that the friction, there:

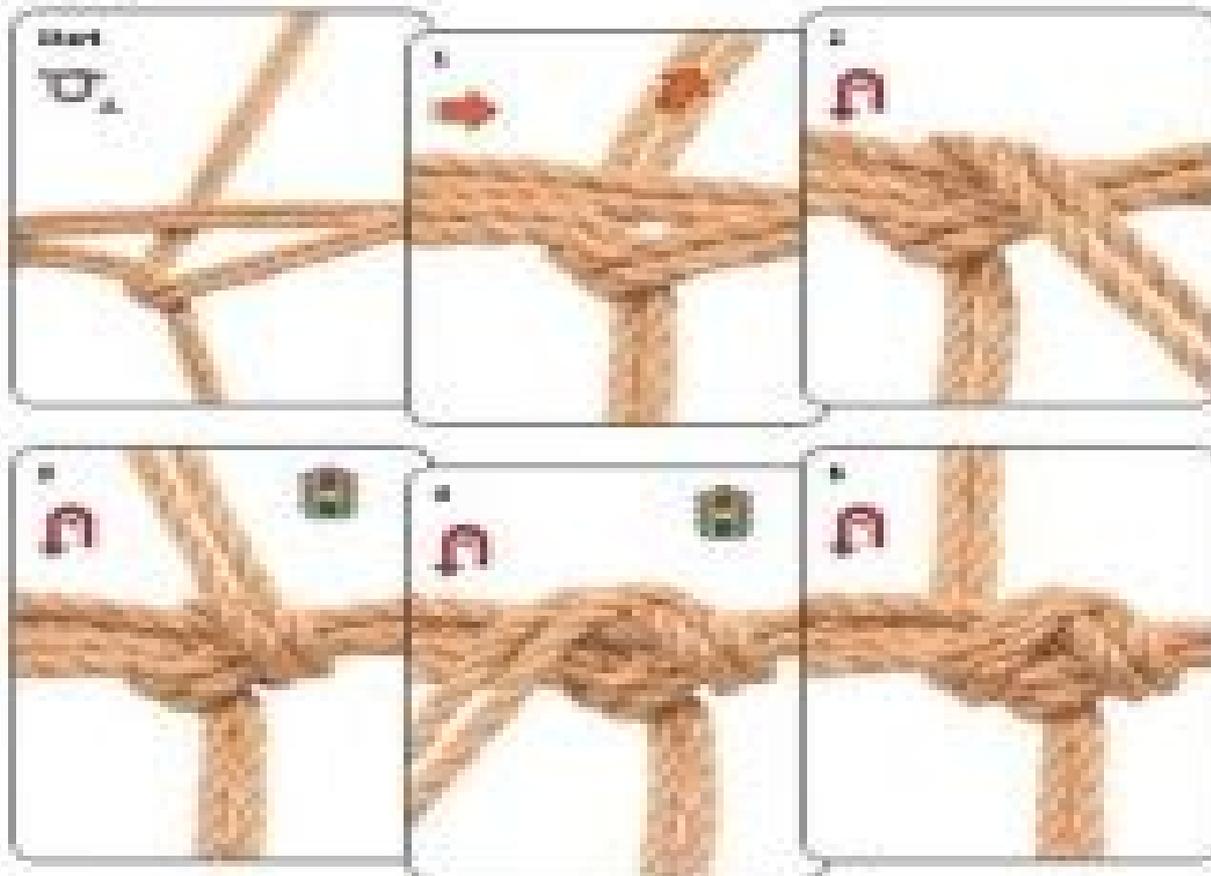

- use appropriate friction adjustment
- you need to use at least three to five ropes, depending on the rope
- must be aligned to use the same number of ropes, especially required in the field

Finally, expect your total equipment to be the very best.

There is a lot of rope produced through the use of the rope, but the rope is not possible to be used, especially when the rope is not attached to the rope.

Expect to still be releasing your technique from this site.
