

VERY SHORT INTRODUCTIONS

The background of the slide is a landscape painting. The top half is a deep, dark blue sky. Below the sky is a dense line of trees with foliage in shades of yellow, orange, and red, suggesting autumn. The bottom portion of the image shows a field of tall grass in shades of blue and green, possibly due to the lighting or the painting's style.

Complexity: A Very Short Introduction John H. Holland, 2014-07-24 The importance of complexity is well captured by Hawking's comment Complexity is the science of the 21st century From the movement of flocks of birds to the Internet environmental sustainability and market regulation the study and understanding of complex non linear systems has become highly influential over the last 30 years In this Very Short Introduction one of the leading figures in the field John Holland introduces the key elements and conceptual framework of complexity From complex physical systems such as fluid flow and the difficulties of predicting weather to complex adaptive systems such as the highly diverse and interdependent ecosystems of rainforests he combines simple well known examples Adam Smith's pin factory Darwin's comet orchid and Simon's watchmaker with an account of the approaches involving agents and urn models taken by complexity theory

Pilot Competency and Capability Steven Green, 2023-04-06 Pilot Competency and Capability presents strategies for the air carrier pilot in command operating complex engineered systems within a complex natural environment It bridges the gap between academic books and practical application by providing real

world examples of how various safety and operational theories work in practice The book advises on how to develop concepts strategies and ways of thinking that integrate with existing structures and FAA regulations while understanding how engineered systems and codified structures interface with complex natural environments It considers how the prescribed safety margins function to manage emergent behaviors of both the natural environment and the engineered systems The book is intended for airline pilots training captains simulator instructors and aviation students taking courses in aviation safety risk management and flight safety to improve in flight decision making risk analysis and strategic planning

Computation in Science Konrad Hinsien,2015-12-01 This book provides a theoretical background in computation to scientists who use computational methods It explains how computing is used in the natural sciences and provides a high level overview of those aspects of computer science and software engineering that are most relevant for computational science The focus is on concepts results and applications rather than on proofs and derivations The unique feature of this book is that it connects the dots between computational science the theory of computation and information and software engineering The book should help scientists to better understand how they use computers in their work and to better understand how computers work It is meant to compensate a bit for the general lack of any formal training in computer science and information theory Readers will learn something they can use throughout their careers [SDGs in the Americas and Caribbean Region](#)
