

We have, for example,

Theorem 4.1. Let the sets B, C belong to some PRC class \mathcal{E} . Then so do the sets $B \cup C, B \cap C, \bar{B}$.

Proof. This is an immediate consequence of Theorem 5.1, Chapter 3. ■

As long as the Gödel numbering functions $[x_1, \dots, x_n]$ and $(x)_i$ are available, we can restrict our attention to subsets of N . We have, for example,

Theorem 4.2. Let \mathcal{E} be a PRC class, and let B be a subset of N^m , $m \geq 1$. Then B belongs to \mathcal{E} if and only if

$$B' = \{[x_1, \dots, x_m] \in N \mid (x_1, \dots, x_m) \in B\}$$

belongs to \mathcal{E} .

Proof. If $P_B(x_1, \dots, x_m)$ is the characteristic function of B , then

$$P_{B'}(x) \Leftrightarrow P_B((x)_1, \dots, (x)_m) \ \& \ \text{Lt}(x) = m$$

is the characteristic function of B' , and $P_{B'}$ clearly belongs to \mathcal{E} if P_B belongs to \mathcal{E} . On the other hand, if $P_{B'}(x)$ is the characteristic function of B' , then

$$P_B(x_1, \dots, x_m) \Leftrightarrow P_{B'}([x_1, \dots, x_m])$$

is the characteristic function of B , and P_B clearly belongs to \mathcal{E} if $P_{B'}$ belongs to \mathcal{E} . ■

It immediately follows, for example, that $\{[x, y] \in N \mid \text{HALT}(x, y)\}$ is not a computable set.

Definition. The set $B \subseteq N$ is called *recursively enumerable* if there is a partially computable function $g(x)$ such that

$$B = \{x \in N \mid g(x) \downarrow\}. \quad (4.1)$$

The term *recursively enumerable* is usually abbreviated *r.e.* A set is recursively enumerable just when it is the domain of a partially computable function. If \mathcal{P} is a program that computes the function g in (4.1), then B is simply the set of all inputs to \mathcal{P} for which \mathcal{P} eventually halts. If we think of \mathcal{P} as providing an algorithm for testing for membership in B , we see that for numbers that do belong to B , the algorithm will provide a

Computability, Complexity, and Languages Martin Davis, Ron Sigal, Elaine J. Weyuker, 1994-03-18 Computability Complexity and Languages is an introductory text that covers the key areas of computer science including recursive function theory formal languages and automata It assumes a minimal background in formal mathematics The book is divided into five parts Computability Grammars and Automata Logic Complexity and Unsolvability Computability theory is introduced in a manner that makes maximum use of previous programming experience including a universal program that takes up less than a page The number of exercises included has more than tripled Automata theory computational logic and complexity theory are presented in a flexible manner and can be covered in a variety of different arrangements *Computability, Complexity, and Languages* Martin Davis, Elaine J. Computability, Complexity, Logic E. Börger, 1989-07-01 The theme of this book is formed by a pair of concepts the concept of formal language as carrier of the precise expression of meaning facts and problems and the concept of algorithm or calculus i e a formally operating procedure for the solution of precisely described questions and problems The book is a unified introduction to the modern theory of these concepts to the way in which they developed first in mathematical logic and computability theory and later in automata theory and to the theory of formal languages and complexity theory Apart from considering the fundamental themes and classical aspects of these areas the subject matter has been selected to give priority throughout to the new aspects of traditional questions results and methods which have developed from the needs or knowledge of computer science and particularly of complexity theory It is both a textbook for introductory courses in the above mentioned disciplines as well as a monograph in which further results of new research are systematically presented and where an attempt is made to make explicit the connections and analogies between a variety of concepts and constructions

Models of Computation and Formal Languages R. Gregory Taylor, Ralph Gregory Taylor, 1998 Models of Computation and Formal Languages presents a comprehensive and rigorous treatment of the theory of computability The text takes a novel approach focusing on computational models and is the first book of its kind to feature companion software Deus Ex Machina developed by Nicolae Savoiu comprises software simulations of the various computational models considered and incorporates numerous examples in a user friendly format Part I of the text introduces several universal models including Turing machines Markov algorithms and register machines Complexity theory is integrated gradually starting in Chapter 1 The vector machine model of parallel computation is covered thoroughly both in text and software Part II develops the Chomsky hierarchy of formal languages and provides both a grammar theoretic and an automata theoretic characterization of each language family Applications to programming languages round out an in depth theoretical discussion making this an ideal text for students approaching this subject for the first time Ancillary sections of several chapters relate classical computability theory to the philosophy of mind cognitive science and theoretical linguistics Ideal for Theory of Computability and Theory of Algorithms courses at the advanced undergraduate or beginning graduate level Models of Computation and Formal Languages is one of the only texts that Features accompanying software available on the World Wide Web at <http://home.manhattan.edu/gregory.taylor/thcomp> Adopts an integrated approach to complexity theory
