Heat Transfer Tools Robert J. Ribando, 2002 Heat Transfer Tools with CD ROM is the first resource to effectively link project based learning to introductory Heat Transfer courses. This effective software package offers multiple projects developed to provide students with a new dimension in exploring design and working with open ended problems. The CD ROM included with the text offers assorted project work in a combination of spreadsheet formats, Visual Basic executables, Windows help files, and Fortran dll files. The interface is intuitive, providing graphics and boxes for inputting math information for each project and leading students to a better understanding of major equations. Features: Students gain experience using the computer to explore designs and solve open ended problems. The CD ROM does not require any advanced systems resources; it will work on any Windows machine with basic memory resources (64K) and a graphics card. Modern research based numerical algorithms function behind the scenes in most of the nine canned modules. Thorough write ups of most of these algorithms are included as pdf files on the CD ROM. Modern custom user interfaces coupled with extensive use of graphical displays allow users to test parameters and to visualize and understand the underlying physics. This software was created solely for instruction use. The modules are NOT stripped down versions of a professional Computational Fluid Dynamics (CFD) package. With no extraneous inputs and outputs, these modules have virtually no learning curve. Learning the software is learning the heat transfer. In addition to the nine Visual Basic Fortran modules, six projects intended for implementation by students are provided. A separate appendix on the CD ROM teaches students everything they need to know about Visual Basic for Applications (VBA), the extremely powerful and flexible programming language incorporated into Excel. Instructors can use these modules as lecture aids in a classroom equipped with a projection system, or as the nucleus of a hands on approach to heat transfer instruction in a computer classroom. All the canned modules can be verified for at least some parameters by comparison with traditional analytical solutions or experimental data. Verification of results is stressed throughout. Introduces students to Computational Fluid Dynamics (CFD) by application to simple fundamental problems. In contrast, many practicing engineers are introduced to CFD only through two or three day short courses provided by vendors. Several of these modules have been under development for up to 15 years.

Nearly all Visual Basic modules have been classroom tested at the undergraduate level five times and at the graduate level twice They have been debugged and enhanced extensively during that time Computer Simulation Analysis of Biological and Agricultural Systems Barney K. Huang,1994-03-22 Computer Simulation Analysis of Biological and Agricultural Systems focuses on the integration of mathematical models and the dynamic simulation essential to system analysis design and synthesis The book emphasizes the quantitative dynamic relationships between elements and system responses Problems of various degrees of difficulty and complexity are discussed to illustrate methods of computer aided design and analysis that can bridge the gap between theories and applications These problems cover a wide variety of subjects in the biological and agricultural fields Specific guidelines and practical methods for defining requirements developing specifications and integrating system modeling early in simulation development are included as well Computer Simulation Analysis of Biological and Agricultural Systems is an excellent text and self guide for agricultural engineers agronomists foresters horticulturists soil scientists mechanical engineers and computer simulators **Applied Mechanics Reviews** ,1989 Paper ,1998
