Principles of Modern Radar: Basic principles Mark A. Richards, Jim Scheer, William A. Holm, 2012 Fundamentals of Radar Signal Processing, Third Edition Mark A. Richards, 2022-04-01 A complete guide to the full spectrum of fundamental radar signal processing systems fully updated for the latest advances This thoroughly revised resource offers comprehensive coverage of foundational digital signal processing methods for both pulsed and FMCW radar Developed from the author s extensive academic and professional experience Fundamentals of Radar Signal Processing Third Edition covers all of the digital signal processing techniques that form the backbone of modern radar systems revealing the common threads that unify them The basic tools of linear systems filtering sampling and Fourier analysis are used throughout to provide a unified tutorial approach You will get end of chapter problems that reinforce and apply salient points as well as an online suite of tutorial MATLAB R demos and supplemental technical notes Classroom instructors additionally receive a solutions manual and sample MATLAB tutorial demos Coverage includes An introduction to radar systems Signal models Data acquisition and organization Waveforms and pulse compression Doppler processing Threshold detection and CFAR Measurements and tracking Synthetic aperture imaging Adaptive array processing and STAP **Fundamentals of Radar Signal Processing, 3E** Mark A. Richards, 2022-04-01 Your cutting edge introduction to radar signal processing fully updated for the latest advances This up to date guide provides in depth coverage of the full breadth of foundational radar signal processing methods of waveform design Doppler processing detection tracking imaging and adaptive processing from a digital signal processing perspective The techniques of linear systems filtering sampling and Fourier analysis are used throughout to provide a unified tutorial approach Developed from the author s extensive academic and professional experience Fundamentals of Radar Signal Processing Third Edition has been revised and updated throughout Readers will find the solid foundations of earlier editions enhanced with new material on such topics as keystone formatting detection in spiky clutter range migration and backprojection imaging virtual arrays ground moving target indication and many more Presents complete coverage of foundational digital radar signal processing techniques Integrates linear FMCW techniques of emerging fields such as automotive radar with pulsed methods Includes additional homework problems in all chapters Comes with an online suite of answer keys solutions manuals tutorial MATLAB demos and technical notes **Operations Research Proceedings 2015** Karl Franz Dörner, Ivana Ljubic, Georg Pflug, Gernot Tragler, 2017-03-07 This book gathers a selection of refereed papers presented at the International Conference on Operations Research OR2015 which was held at the University of Vienna Austria September 1 4 2015 Over 900 scientists and students from 50 countries attended this conference and presented more than 600 papers in parallel topic streams as well as special award sessions Though the guiding theme of the conference was Optimal Decision and Big Data this volume also includes papers addressing practically all aspects of modern Operations Research Principles of Modern Radar Mark A. Richards, Jim Scheer, William L. Melvin, William A. Holm, 2010

Annotation This third volume in the Principles of Modern Radar set is a professional reference of the most important applications in current practice and includes a foundation of research before tackling in depth single topic advanced books and literature The book has concise descriptions of the purposes principal issues and methods found in a wide variety of current radar types with military commercial and civilian uses This book has been community reviewed by experts from around the world It provides concise descriptions of the purposes principal issues and radar methods found in a wide variety of current radar types including low power continuous wave CW radar weather radar and military applications Each chapter is authored by experts in the field who are active in research and teaching radar practitioners in professional courses This edition will serve as a self contained reference for those aiming to become experts in an advanced technology or application area Primarily aimed at radar practitioners within military or government and will also be useful for some advanced graduate students Click here to view the first chapter

Design of Unmanned Aerial Systems Mohammad H. Sadraey,2020-04-13 Provides a comprehensive introduction to the design and analysis of unmanned aircraft systems with a systems perspective Written for students and engineers who are new to the field of unmanned aerial vehicle design this book teaches the many UAV design techniques being used today and demonstrates how to apply aeronautical science concepts to their design Design of Unmanned Aerial Systems covers the design of UAVs in three sections vehicle design autopilot design and ground systems design in a way that allows readers to fully comprehend the science behind the subject so that they can then demonstrate creativity in the application of these concepts on their own It teaches students and engineers all about UAV classifications design groups design requirements mission planning conceptual design detail design and design procedures It provides them with in depth knowledge of ground stations power systems propulsion systems automatic flight control systems guidance systems navigation systems and launch and recovery systems Students will also learn about payloads manufacturing considerations design challenges flight software microcontroller and design examples In addition the book places major emphasis on the automatic flight control systems and autopilots Provides design steps and procedures for each major component Presents several fully solved step by step examples at component level Includes numerous UAV figures images to emphasize the application of the concepts Describes real stories that stress the significance of safety in UAV design Offers various UAV configurations geometries and weight data to demonstrate the real world applications and examples Covers a variety of design techniques processes such that the designer has freedom and flexibility to satisfy the design requirements in several ways Features many end of chapter problems for readers to practice Design of Unmanned Aerial Systems is an excellent text for courses in the design of unmanned aerial vehicles at both the upper division undergraduate and beginning graduate levels
