Heat Transfer Gregory Nellis, Sanford Klein, 2008-12-22 This textbook provides engineers with the capability tools and confidence to solve real world heat transfer problems It includes many advanced topics such as Bessel functions Laplace transforms separation of variables Duhamel s theorem and complex combination as well as high order explicit and implicit numerical integration algorithms These analytical and numerical solution methods are applied to topics not considered in most textbooks Examples include heat exchangers involving fluids with varying specific heats or phase changes heat exchangers in which axial conduction is a concern and regenerators Derivations of important results are presented completely without skipping steps which reduces student frustration and improves readability and retention The examples are not trivial textbook exercises they are rather complex and timely real world problems that are inherently interesting This book integrates the computational software packages Maple MATLAB FEHT and Engineering Equation Solver EES directly with the heat transfer material

Thermodynamics Sanford Klein, Gregory Nellis, 2011-10-10 This book differs from other thermodynamics texts in its objective which is to provide engineers with the concepts tools and experience needed to solve practical real world energy problems The presentation integrates computer tools such as EES with thermodynamic concepts to allow engineering students and practising engineers to solve problems they would otherwise not be able to solve The use of examples solved and explained in detail and supported with property diagrams that are drawn to scale is ubiquitous in this textbook The examples are not trivial drill problems but rather complex and timely real world problems that are of interest by themselves As with the presentation the solutions to these examples are complete and do not skip steps Similarly the book includes numerous end of chapter problems both typeset and online Most of these problems are more detailed than those found in other thermodynamics textbooks The supplements include complete solutions to all exercises software downloads and additional content on selected topics These are available on the book s website www.cambridge.org/KleinandNellis

The Basics of Heat John O. E. Clark, 2014-07-15 We often automatically equate heat with temperature to such a degree that we may not take the time to consider what heat really is Heat refers to the energy that is transferred from one body to another that is at a lower temperature This transfer occurs often without us knowing it but it is ever present and crucial to all life This volume examines the basics of heat and the related concept of temperature Detailed diagrams help illustrate such concepts as specific heat capacity and latent heat Clear text explains the difference between conduction convection and radiation as well as emitters absorbers and more

Solar Energy Conversion Systems Jeffrey R. S. Brownson, 2013-11-09 Solar energy conversion requires a different mind set from

traditional energy engineering in order to assess distribution scales of use systems design predictive economic models for fluctuating solar resources and planning to address transient cycles and social adoption Solar Energy Conversion Systems examines solar energy conversion as an integrative design process applying systems thinking methods to a solid knowledge base for creators of solar energy systems This approach permits different levels of access for the emerging broad audience of scientists engineers architects planners and economists Traditional texts in solar energy engineering have often emerged from mechanical or chemical engineering fields Instead Solar Energy Conversion Systems approaches solar energy conversion from the perspectives of integrative design environmental technology sustainability science and materials science in the wake of amazing new thin films polymers and glasses developed by the optoelectronics and semiconductor industries This is a new solar text for the new generation of green job designers and developers It s highlighted with vignettes that break down solar conversion into useful stories and provides common points of reference as well as techniques for effective estimation of evolving technologies Contextualizes solar conversion for systems design and implementation in practical applications Provides a complete understanding of solar power from underlying science to essential economic outcomes Analytical approach emphasizes systems simulations from measured irradiance and weather data rather than estimations from rules of thumb Emphasizes integrative design and solar utility where trans disciplinary teams can develop sustainable solar solutions that increase client well being and ecosystems services for a given locale
