The finite difference solution of mathematical physics differential equations is carried out in two stages 1 the writing of the difference scheme a difference approximation to the differential equation on a grid 2 the computer solution of the difference equations which are written in the form of a high order system of linear algebraic equations of special form ill conditioned band structured Application of general linear algebra methods is not always appropriate for such systems because of the need to store a large volume of information as well as because of the large amount of work required by these methods For the solution of difference equations special methods have been developed which in one way or another take into account special features of the problem and which allow the solution to be found using less work than via the general methods This work is an extension of the book *Difference Method for the Solution of Elliptic Equation* by A A Samarskii and V B Andreev which considered a whole set of questions connected with difference approximations the construction of difference operators and estimation of the convergence rate of difference schemes for typical elliptic boundary value problems Here we consider only solution methods for difference equations The book in fact consists of two volumes     *Solutions of Certain Matrix Equations with Applications to Engineering Sciences* James L. Leuthauser,AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OHIO SCHOOL OF ENGINEERING.,1976 Solutions of certain matrix equations are presented in this thesis Results of Mitra are used to extend current methods of obtaining a general form of the solution of the Liapunov equation Solutions of the general linear matrix equation including important special cases are obtained under rather general conditions on the matrices Necessary and sufficient conditions are established for the existence of a solution of  $AX = C$  where the elements of the matrices belong to the polynomial domain of the field of real numbers Representations of solutions to the algebraic Riccati equation are given along with original techniques for computation of solutions and conditions for uniqueness Sufficient conditions for the existence of the generalized nonlinear algebraic and differential Riccati equations are established The classical Newton Raphson method of finding zeros of functions of a single variable is extended to the case of finding zeros of functions of a matrix variable including determining the inverse of a matrix An extensive bibliography includes a comprehensive listing of articles which provide historical and developmental background on the matrix equations considered in this thesis Author     *Matrices Solutions* ,2004
