## Zwirner Analisi Matematica:

**Elementi di analisi matematica** Giuseppe Zwirner, 1973      **Physical Modeling and Computational Techniques for Thermal and Fluid-dynamics** Maurizio Bottoni, 2021-11-12

This book on computational techniques for thermal and fluid dynamic problems arose from seminars given by the author at the Institute of Nuclear Energy Technology of Tsinghua University in Beijing China. The book is composed of eight chapters, some of which are characterized by a scholastic approach, others are devoted to numerical solution of ordinary differential equations of first order and of partial differential equations of first and second order respectively. In Chapter IV basic concepts of consistency, stability, and convergence of discretization algorithms are covered in some detail. Other parts of the book follow a less conventional approach, mainly informed by the author's experience in teaching and development of computer programs. Among these is Chapter III where the residual method of Orthogonal Collocations is presented in several variants, ranging from the classical Galerkin method to Point and Domain Collocations applied to numerical solution of partial differential equations of first order. In most cases, solutions of fluid dynamic problems are led through the discretization process to the numerical solutions of large linear systems. Intended to impart a basic understanding of numerical techniques that would enable readers to deal with problems of Computational Fluid Dynamics at research level, the book is ideal as a reference for graduate students, researchers, and practitioners.

*New Operational Approaches for Financial Modelling* Constantin Zopounidis, 2012-12-06

This book is devoted to the 19<sup>th</sup> Meeting of the EURO Working Group on Financial Modelling held in Chania, Crete, Greece, November 28-30, 1996. The EURO Working Group on Financial Modelling was founded in September 1986 in Lisbon. The primary field of interest for the Working Group can be described as the development of financial models that help to solve problems faced by financial managers in the firm. From this point of view, the following objectives of the Working Group are distinguished: providing an international forum for exchange of information and experience on financial modelling; encouraging research in financial modelling; i.e. new techniques, methodologies, software, empirical studies, etc.; stimulating and strengthening the interaction between financial economic theory and the practice of financial decision making; cooperating and exchanging information with universities and financial institutions throughout Europe. According to the above objectives, the basic aim of this book is to present some new operational approaches, i.e. neural nets, multicriteria analysis, new optimization algorithms, decision software, etc. for financial modelling, both in a theoretical and practical level. Thus, the present volume is divided into nine chapters. The first chapter refers to the new trends in financial modelling and includes two invited papers by Gil Aluja and Pardalos. The second chapter involves papers on the topic of high performance computing and finance, which is a European Union project in which participate some members of the EURO Working Group on Financial Modelling: Spronk, Zenios, Dempster, etc.
