Perpetual Motion Machines Working Against Physical Laws:

Law of Perpetual Motion IntroBooks Team, The Law of Perpetual Motion can be defined as a mechanism that never stops moving If it starts rolling once and is left running it would run indefinitely People may not be aware of the Big Freeze It is the theoretical end of everything It is the stage at which the universe has stretched to having no leverage of thermodynamic energy In other words it is the threshold at which the entire universe will cease to maintain motion The entire universe will become absolute zero It is the coldest temperature where everything is at a standstill In short the Big Freeze is a period of infinite everlasting and absolutely quiet darkness It will not repeat for another 100 trillion years or more It has to be kept in mind that an actual perpetual motion machine would be capable of running for at least that long Many plans for perpetual motion machines may be seen online that claim to be functional Looking at those designs it is not illogical to believe that some of them could if properly designed continue running If someone wants to succeed the impact would be massive There is an infinite supply of energy However it would be more than that by way of unrestricted energy Perpetual motion devices governed by the Law of Perpetual Motion are unfortunately unattainable related to the inherent physics of the universe
