provide water that is free from pathogens and toxins Most countries now have water quality regulations or guidelines which are driving water authorities to produce purer water with the minimum of contamination from natural or man made origin At the same time consumers are demanding that chemicals added during the treatment of drinking water be kept to a minimum As a consequence conventional clarification methods are being challenged to comply with the new regulations and restrictions and our understanding of the mechanisms involved is being tested as never before Interface Science in Drinking Water Treatment contains a rigorous review of water treatment practices from a fundamental viewpoint The book includes material from leading experts in the field of water treatment reviewing their specific fields of expertise against a background of colloid and surface chemistry and examines each step of the journey from source to consumer tap It therefore permits the reader to develop a deep understanding of the complex processes taking place and of the necessary treatments which are vital for the provision of safe and palatable drinking water The book is aimed at researchers educators and practitioners in science and engineering particularly those involved in water treatment and colloidal chemistry Covers all existing water treatment processes approached from a fundamental surface and colloid science viewpoint Unique collection of R D authors all experts in water treatment processes Comprehensive review of water treatment with a complete list of references
