Divined Explanations. The Theological and Philosophical Context for the Development of the Sciences (1600-2000) ,2024-12-02 Critical junctures in the historical development of science owe their origins to ideas concepts and theories that became definitive in the minds of leading scientists who lived in a more or less religious culture Scientists are never solitary but always internal to a network of scientific relationships and friendships They have a well attested genius nurtured not only by their scientific training but also by ideas and stimuli received from the cultural and social contexts in which they lived In particular metaphysical and theological aspirations guided the genesis of many scientific ideas This book offers twelve examples of the development of scientific ideas that were shaped by religious factors and which changed the course of science itself The interwoven nature of

science philosophy theology and culture is pervasive in these cases thus demonstrating that throughout the modern era natural philosophy enjoyed a deep coherence with theology That entanglement lingers in the minds of scientists into the contemporary period and it continues to nourish scientific creativity in subtle and profound ways New explanations of the world have emerged through illuminative revolutionary and one might say divined ways
