P1-) The transistor Q in the chopper shown below has a maximum (dv/dt) rating of $50 \text{ V}/\mu\text{s}$. It is used to supply a resistive load of $R_L = 100 \ \Omega$. Find the snubber capacitance C_s required to protect the transistor for dv/dt , when it is turned off. Assume that the transistor is turned off at $t=0$, and $v_c(0)=0$.

Solution:

The solution for the capacitor voltage after Q is turned off:

$$v_c(t) = V_s(1 - e^{-t/\tau}) \quad \tau = (R_s + R_L)C_s$$

$$i = C_s \frac{dv_c}{dt} = \frac{V_s}{R_s + R_L} e^{-t/\tau} \quad \Rightarrow \quad v(t) = V_s - R_L i = V_s \left[1 - \frac{R_L}{R_s + R_L} e^{-t/\tau} \right]$$

$$\begin{aligned} \frac{dv}{dt} &= V_s \frac{R_L}{C_s (R_s + R_L)^2} e^{-t/\tau} \quad \Rightarrow \quad \left(\frac{dv}{dt} \right)_{\max} = V_s \frac{R_L}{C_s (R_s + R_L)^2} = \frac{9.8765}{C_s} = 50 \text{ V}/\mu\text{s} = 50 \times 10^6 \text{ V/s} \\ \Rightarrow \quad C_s &= 0.1975 \ \mu\text{F} \end{aligned}$$

Alternatively, the voltage across Q can be solved directly from the eqn. $x(t) = x(\infty) + [x(0) - x(\infty)]e^{-t/\tau}$

$$v(\infty) = v_c(\infty) = V_s \quad v(0^+) = R_L i(0^+) = R_L \frac{V_s}{R_s + R_L} \quad \tau = (R_s + R_L)C_s$$

$$\Rightarrow v(t) = V_s + \left[V_s \frac{R_L}{R_s + R_L} - V_s \right] e^{-t/\tau} = V_s \left[1 - \frac{R_L}{R_s + R_L} e^{-t/\tau} \right]$$

Transmission, Distribution, and Renewable Energy Generation Power Equipment Bella H. Chudnovsky, 2017-03-07 The revised edition presents extends and updates a thorough analysis of the factors that cause and accelerate the aging of conductive and insulating materials of which transmission and distribution electrical apparatus is made New sections in the second edition summarize the issues of the aging reliability and safety of electrical apparatus as well as supporting equipment in the field of generating renewable energy solar wind tide and wave power When exposed to atmospheric corrosive gases and fluids contaminants high and low temperatures vibrations and other internal and external impacts these systems deteriorate eventually the ability of the apparatus to function properly is destroyed In the modern world of green energy the equipment

providing clean electrical energy needs to be properly maintained in order to prevent premature failure The book s purpose is to help find the proper ways to slow down the aging of electrical apparatus improve its performance and extend the life of power generation transmission and distribution equipment Principles of Power Electronics John G. Kassakian, Martin F. Schlecht, George C. Verghese, 1991-01-01 *Electrical & Electronics Abstracts*, 1997 *Power Electronics, Problems Manual* F. Czaki, I. Herman, I. Ipsits, 1979-01-01 **A Hundred Solved Problems in Power Electronics** Euzeli dos Santos, Gregory Carlos, 2015-12-29 A Hundred Solved Problems in Power Electronics presents a large collection of questions and their answers for someone who is interested in understanding the operation principle of power electronics converters By creating a real engineering environment around the question the goal of this book is to contribute on the development of a qualified electrical engineering workforce By using engineering language and technical terminology jargon this book deals primarily with the challenge of designing power converters for specific applications This includes but is not limited to personal computer power supply regulated voltage source and interconnection of renewable energy sources Since engineering is the application of science to practical use the link with a real world activity fills the gap between theory and practical application and increases the curiosity of the students Before each question there is a short text explaining the purpose of that specific problem and how it is associated with real world conditions The majority of the questions in this book follow a logical sequence which is an attempt to demonstrate the step by step process of a power electronics converter design Indeed the purpose of this book is to present a more exciting type of question and show how the theory in power electronics is related to real world problems Rather than just plugging in numbers for a given equation this book shows practical examples on how to use scientific and technical knowledge to make operate and maintain complex systems Although engineering is one of the professions that actually allows someone to build and create something that could eventually change the life of people e g personal computer or satellite there is sometimes a lack of motivation from the students in the classroom It is quite clear that the students are comfortable with math especially at the senior level Therefore the lack of motivation is not due to background deficiency Instead the discouragement increases when students do not correlate the subject taught with their future professional activities Also the way traditional lectures are set up with theory presentation followed by examples where students just need to plug in the given data into specific equations does not keep students interest and attention In fact the moment of solving a specific problem in a traditional way to teach comes down to this question what s the equation that I need to use to plug these given numbers This is stimulated by the way the problems are designed We hope that this book offers an alternative on how the students view and address the problems in power electronics This book is a desirable didactic material to be employed as a reference book instead of a text book from which the instructor prepares his her lecture Notice that the terminology used in A Hundred Solved Problems in Power Electronics is not necessarily the same as the one seen in either the text book or from the instructor lectures This is actually a benefit for

the students in electrical engineering since they will learn different terms for the same component or electrical element. Certainly this difference in nomenclature will be seen by the students as an advantage when they are reading technical datasheets and realize that manufacturers often use different terms for the same information. By dividing this book into five parts, the authors compile the solved problems into the following categories: 1 Converters with power diodes, 2 SCR converters, 3 Dc dc converters, 4 Dc ac converters, 5 Isolated dc ac converters. Such a book structure follows the same sequence of topics as most power electronics books in the technical literature, which simplifies the use of *A Hundred Solved Questions in Power Electronics* as a recommended book in parallel with other references.

Power Electronics Kjeld Thorborg, 1993-01.
