

## Electric Circuits

2. Consider the two requirements for an electric circuit (described in question #1). When a light bulb is burned out and no longer works, requirement # \_\_\_\_\_ is not met. When a battery no longer works, requirement # \_\_\_\_\_ is not met.
3. What do you believe? Respond to the following statements as being **TRUE** or **FALSE**.
- When a battery no longer works, it is out of charge and must be re-charged before it can be used again. **T or F**
  - A battery can be a source of charge in a circuit. The charge which flows through the circuit originates in the battery. **T or F**
  - Charge becomes used up as it flows through a circuit. The amount of charge which exits a light bulb is less than the amount which enters the light bulb. **T or F**
  - Charge flows through circuits at very high speeds. This explains why the light bulb turns on immediately after the wall switch is flipped. **T or F**
  - Commonwealth Edison supplies millions and millions of electrons to our homes everyday. **T or F**

4. A current is said to exist whenever \_\_\_\_\_
- a wire is charged
  - a battery is present
  - electric charges are unbalanced
  - electric charges move in a loop
5. As a quantity, electric current is defined as the \_\_\_\_\_
- amount of charge present in a circuit
  - potential energy per charge
  - rate at which charge moves through a cross-sectional area of a wire
  - speed at which charge moves from one location to another location

6. Complete the statements:

- A current of one ampere is a flow of charge at the rate of \_\_\_\_\_ coulomb per second.
- When a charge of 8 C flows past any point along a circuit in 2 seconds, the current is \_\_\_\_\_ A.
- If 5 C of charge flow past point A (diagram at right) in 10 seconds, then the current is \_\_\_\_\_ A.
- If the current at point D is 2.0 A, then \_\_\_\_\_ C of charge flow past point D in 10 seconds.
- If 12 C of charge flow past point A in 3 seconds, then 8 C of charge will flow past point E in \_\_\_\_\_ seconds.
- TRUE or FALSE:**

The current at point E is considerably less than the current at point A since charge is being used up in the light bulbs.

7. Which sentence best describes what happens to charge as it moves through an electric circuit?
- Charge is consumed or used up.
  - Charge is re-energized and recycled.
8. Which sentence best describes how fast charge moves through an electric circuit?
- Charge moves very fast; faster than any human can run.
  - Charge moves very slow; slower than the proverbial snail.
9. When you turn on the room lights, they light immediately. This is best explained by the fact that \_\_\_\_\_
- electrons move very fast from the switch to the light bulb filament.
  - electrons present everywhere in the circuit move instantly.

**Electric Circuits Fundamentals** Sergio Franco, 1995 This exciting new text teaches the foundations of electric circuits and develops a thinking style and a problem solving methodology that is based on physical insight Designed for the first course or sequence in circuits in electrical engineering the approach imparts not only an appreciation for the elegance of the mathematics of circuit theory but a genuine feel for a circuit s physical operation This will benefit students not only in the rest of the curriculum but in being able to cope with the rapidly changing technology they will face on the job The text covers all the traditional topics in a way that holds students interest The presentation is only as mathematically rigorous as is needed and theory is always related to real life situations Franco introduces ideal transformers and amplifiers early on to stimulate student interest by giving a taste of actual engineering practice This is followed by extensive coverage of the operational amplifier to provide a practical illustration of abstract but fundamental concepts such as impedance transformation and root location control always with a vigilant eye on the underlying physical basis SPICE is referred to throughout the text as a means for checking the results of hand calculations and in separate end of chapter sections which introduce the most important SPICE features at the specific points in the presentation at which students will find them most useful Over 350 worked examples 400 plus exercises and 1000 end of chapter problems help students develop an engineering approach to problem solving based on conceptual understanding and physical intuition rather than on rote procedures **Technology Review**, 1964 *The School Science Review*, 2007 *Radio and Electronics*, 1952
