*Plastic Analysis and Design of Steel Structures* M. Bill Wong, 2011-08-30 The plastic analysis method has been used extensively by engineers for designing steel structures Simpler structures can be analyzed using the basic virtual work formulation but more complex frames are evaluated with specialist computer software This new book sets out a method for carrying out plastic analysis of complex structures without the need for specialist tools The book provides an introduction to the use of linear programming techniques for plastic analysis This powerful and advanced method for plastic analysis is important in an automated computational environment in particular for non linear structural analysis A detailed comparison between the design codes for the United States and Australia and the emerging European Eurocodes enables practising engineers to understand the issues involved in plastic design procedures and the limitations imposed by this design method Covers latest research in plastic analysis and analytical tools Introduces new successive approximation method for calculating collapse loads Programming guide for using spreadsheet tools for plastic analysis

Plastic Design and Second-order Analysis of Steel Frames Wai-Fah Chen, I. Sohal, 1995 Plastic Design of Steel Frames assesses the current status and future direction of computer based analyses of inelastic strength and stability for direct frame design It shows how design rules are used in practical frame design and provides an introduction to the second order theory of inelastic frame design The book includes two computer programs on a diskette one for the first order analyses and the other for the second order plastic hinge analysis of planar frame design The second order program can be used to predict realistic strengths and stabilities of planar frames thereby eliminating the tedious task of estimating factors for individual member capacity checks Both programs include clear input instructions The diskette also contains the Fortran source code listing for the second order plastic hinge analysis enabling the user to customize the program The programs will run on an IBM PC AT or equivalent machine with 640 kB of memory and 30 MB hard drive

**Plastic Design of Steel Frames** Lynn S. Beedle, 1958

**Plastic Design in High Strength Steel. the Elastic-plastic Analysis of Plane Flexural Frames** H. B. Harrison, LEHIGH UNIV BETHLEHEM PA FRITZ ENGINEERING LAB., 1965 An account is given of a Fortran program for the elasticplastic analysis of plane flexural frames The program has been developed from one first written by Professor C K Wang and has proved to be useful in the study of steel structures With a minimum of input data the program will enable a computer to carry out a series of elastic analyses of a steel structure The position of each plastic hinge will be determined as it is formed and the load factor and deformed state of the structure will be output as each such event occurs When the collapse mechanism is found the rotations at each plastic hinge are computed as well as the deformations and load factor at the outset of failure Frames of moderate size can be analyzed by currently operating machines but an upper limit

will exist for the frame size that can be handled by any given machine The limitations of the program are discussed in detail and several examples are given of its application Author *Steel Structures* Charles G. Salmon, John Edwin Johnson, Faris Amin Malhas, 2009 The design of structural steel members has developed over the past century from a simple approach involving a few basic properties of steel and elementary mathematics to a more sophisticated treatment demanding a thorough knowledge of structural and material behavior *Steel Structures Design and Behavior 5 e* strives to present in a logical manner the theoretical background needed for developing and explaining design requirements Beginning with coverage of background material including references to pertinent research the development of specific formulas used in the AISC Specifications is followed by a generous number of design examples explaining in detail the process of selecting minimum weight members to satisfy given conditions *The Analysis and Design of Steel Structures by the Plastic Method* D. S. Green, School of Military Engineering, Civil Engineering School, 1959 *Plastic Hinge Based Methods for Advanced Analysis and Design of Steel Frames* Donald W. White, Wai-Fah Chen, Structural Stability Research Council, 1993 *Stability and Ductility of Steel Structures* T. Usami, Y. Itoh, 1998-07-23 The near field earthquake which struck the Hanshin Awaji area of Japan before dawn on January 17 1995 in addition to snatching away the lives of more than 6 000 people inflicted horrendous damage on the region's infrastructure including the transportation communication and lifeline supply network and of course on buildings too A year earlier the San Fernando Valley area of California had been hit by another near field quake the Northridge Earthquake which dealt a similarly destructive blow to local infrastructures Following these two disasters structural engineers and researchers around the world have been working vigorously to develop methods of design for the kind of structure that is capable of withstanding not only the far field tectonic earthquakes planned for hitherto but also the full impact of near field earthquake Of the observed types of earthquake damage to steel structures there are some whose causes are well understood but many others continue to present us with unresolved problems To overcome these it is now urgently necessary for specialists to come together and exchange information The contents of this volume are selected from the Nagoya Colloquium proceedings will become an important part of the world literature on structural stability and ductility and will prove a driving force in the development of future stability and ductility related research and design
