In Vivo Conservation of Animal Genetic Resources Food and Agriculture Organization of the United Nations, 2013

These guidelines present the basic concepts involved in the development and implementation of in vivo conservation plans for animal genetic resources for food and agriculture. The guidelines are intended for use by policy makers in the management of animal genetic resources, managers of animal breeding organizations, persons responsible for training in management of animal genetic resources and any other stakeholders with leading roles in designing and implementing in vivo conservation programmes for animal genetic resources. Although individual breeders and livestock keepers are not the direct target audience, the guidelines include background information that is relevant for all stakeholders involved in planning conservation programmes.

Genetic Improvement Of Livestock And Poultry C.V. Singh, R.S. Barwal, 2013-01-15

The book presents conventional and modern breeding technologies in the vital areas of animal breeding to stimulate more research and to rapidly pass such modern techniques to the scientific community. Various conventional breeding technologies used for selection and faster multiplication of superior cattle and buffalo germplasm have contributed significantly to increase in milk production, which were mainly due to the technologies developed in the areas of quantitative genetics and reproductive biology. These included methodologies for selection of females based upon their expected producing ability and young males based on the performance of progeny. Emerging developments in the areas of molecular marker systems, animal genome maps, methods of detecting Quantitative Trait Loci (QTL) linkages, Marker Assisted Selection (MAS) etc. are latest tools to be used in breeding programmes for enhancing the rate of genetic progress. These modern techniques could be of great help for those traits for which the conventional technologies have limitations in their use. Therefore, integration of molecular markers with conventional breeding technologies involving pedigree and phenotypic information are probable future breeding tools for genetic improvement of livestock and poultry.
