You also see how to create a base page that helps to centralize programming code that you need on all pages in your site.

Chapter 7 Navigation To help your visitors find their way around your site ASP.NET comes with a number of navigation controls. These controls are used to build the navigation structure of your site. They can be connected to your site's central site map that defines the pages in your web site. You also learn how to programmatically send users from one page to another.

Chapter 8 User Controls User controls are reusable page fragments that can be used in multiple web pages. As such they are great for repeating content such as menus, banners, and so on. In this chapter you learn how to create and use user controls and enhance them with some programmatic intelligence.

Chapter 9 Validating User Input A large part of interactivity in your site is defined by the input of your users. This chapter shows you how to accept, validate, and process user input using ASP.NET Server Controls. Additionally, you see how to send e-mail from your ASP.NET web application and how to read from text files.

Chapter 12 Introducing Databases Understanding how to use a database is critical to building web sites, as most modern web sites require the use of a database. You'll learn the basics of SQL, the query language that allows you to access and alter data in a database. In addition, you are introduced to the database tools found in Visual Web Developer that help you create and manage your SQL Server databases.
