Network Flows Theory Algorithms And Applications Solution:

Network Flows Ravindra K. Ahuja, Thomas L. Magnanti, James B. Orlin, 1993 Among all topics covered in operations research network flows theory offers the best context to illustrate the basic concepts of optimization This book provides an integrative view of the theory algorithms and applications of network flows In order for their presentation to be more intuitive and accessible to a wider audience the authors prefer to adopt a network or graphical viewpoint rather than relying on a linear programming approach

Integer Programming and Related Areas C.

Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl. Math. Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries
