Arena W. David Kelton, Randall P. Sadowski, Deborah A. Sadowski, 2001 This work was the first text on Arena the very popular simulation modelling software What makes this text the authoritative source on Arena is that it was written by its creators The new edition will follow in the tradition of the first edition in its tutorial style via a sequence of carefully crafted examples and an accessible writing style The updates will include thorough coverage of the new version of the Arena software Arena 4.0 a revised statistical analysis material and additional exercises and examples A CD ROM containing the Standard version of the Arena software accompanies the book Simulation Modeling and Analysis of Productivity Enhancement in Manufacturing Company Using Arena Software Siti Hartini Embong @ Ab Wahab, 2013 Every manufacturing company wants to improve and adapt their operating system in order to survive the industry competition In manufacturing organizations to improve their system it might mean to reduce the operating costs that come from the wastes in production line By using the ARENA simulation in this study the productivity improvement can be experimented without physically affect the real system and reduced the cost because designing building testing redesigning rebuilding and retesting can be an expensive project This study focus on the flow in the production line processes in one piston manufacturing company The existing plant layout was studied and formulated into ARENA simulation software as well as to enhance the productivity rate by improving certain parameters The problems identified in this production line are the effect of the bottleneck process which resulting some idle time in some workstations and the increased piston demands from the customers The data acquired and was translated into the ARENA simulation software and studied in order to simulate the existing plant layout design Hence the problems occurred in the production line can be seen clearly to determine room for productivity improvement New designs are proposed by constructing several models to acquire the best solution to improve productivity capacity and meet the forecasting demand of customer In these proposed models the parameters of the actual system are modified accordingly in the terms of material handling such as human resources machine cycle time the number of machines shape and area of plant layout From the simulation results the significant contribution factor that influenced the rate of productivity was by adding certain machines to do the same process to cover the buffer while the material handling did not have a huge effect on the production line Simulation Modeling and Analysis, Sixth Edition Averill M. Law, 2025-02-21 Comprehensive state of the art coverage of every important simulation technique This fully revised book has the most comprehensive and up to date coverage of all aspects of a simulation study Equally well suited for use in university courses simulation practice and self study the book offers clear and intuitive explanations as well as 300 figures 218 examples and 217 problems You will get detailed discussions on modeling and simulation simulation software model verification and validation input modeling random number and variate generation statistical design and analysis of simulation experiments experimental design simulation optimization agent based simulation machine learning and much more Authored by an operations research analyst and industrial engineer with more than 40 years of experience Simulation Modeling and Analysis
