

## Chapter 27

# MAN AND HIS ENVIRONMENT

---

---

**Importance:****Definition:**

Environment is a treasure of all types of resources essential to maintain life on earth. Environment is a direct or indirect source for food, shelter, clothing, fuel etc. for humans.

**Primitive Human Being:**

At the past humans functioned as natural predators (because they used to kill animals for their food) and herbivores (also feeding on natural plants).

**Progress in Agriculture:**

With the adoption of agriculture, some 10,000 years ago, conversion of land to agricultural production began to increase to provide food to growing human population.

Natural diversity was replaced by a few useful species. In this way pattern of food web was changed by eliminating all those species that would subtract or share the energy resources with man.

### ENVIRONMENTAL RESOURCES

These resources are broadly classified into two categories.

- (i) Renewable                      (ii) Non-renewable

**(i) Renewable Resources:****Definition:**

These are the resources, which can be produced again in short time. They are never depleted and are recycled in the nature.

**Examples:**

Air, water, food, land, forests and wild life are renewable resources.

**(ii) Non-Renewable Resources:****Definition:**

These are the resources, which cannot be regenerated in a few generations time. These resources are exhaustible and once consumed cannot be replaced.

**Examples:**
