**QUESTIONS**

Are you able distinguish, how these questions are asked?

- Which one(s) among the following is/are physical property?
- Which one(s) among the following is/are chemical property?

**What are Physical Properties?**

Such as color, taste, smell, texture, boiling point etc. are called physical properties of the substance.

A physical property is a characteristic that can be observed without changing the identity of the substance. Most of the properties of an object can only be observed. For example, you can observe an object's color, texture, shape, size, weight, etc. Physical properties of an object are determined by the particles of the substance. The shape depends on **1**.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the substance you have. They show that no matter how large or small a sample of material is, the particular property is always the same.

**LEARNING OBJECTIVE**

Identify the physical and chemical or colour change observations of properties of matter and distinguish physical and chemical changes in matter.
