

# Chapter 5: Inter-VLAN Routing

## Objectives:

- Familiarize in different Inter-VLAN solutions
- Familiarize in Inter-VLAN configuration using router-on-a-stick
- Familiarize in Inter-VLAN configuration on a multilayer switch through virtual interface

## The Need For Routing

Each network has it's own needs, though whether it's a large or small network, internal routing, in most cases, is essential - if not critical. The ability to segment your network by creating VLANs, thus reducing network broadcasts and increasing your security, is a tactic used by most engineers. Popular setups include a separate broadcast domain for critical services such as File Servers, Print servers, Domain Controllers e.t.c, serving your users non-stop.

The issue here is how can users from one VLAN (broadcast domain), use services offered by another VLAN?

Thankfully there's an answer to every problem and in this case, its VLAN routing:

The above diagram is a very simple but effective example to help you get the idea. Two VLANs consisting of two servers and workstations of which one workstation has been placed along with the servers in VLAN 1, while the second workstation is placed in VLAN 2.

In this scenario, both workstations require access to the File and Print servers, making it a very simple task for the workstation residing in VLAN 1, but obviously not for our workstation in VLAN 2.
