

# 6 THE MUSCULAR SYSTEM

21

$$\frac{285}{306} = \frac{+93}{100}$$

A-

Muscles, the specialized tissues that facilitate body movement, make up about 40% of body weight. Most body muscle is the voluntary type, called skeletal muscle because it is attached to the bony skeleton. Skeletal muscle contributes to body contours and shape, and it composes the organ system called the muscular system. These muscles allow you to grin, frown, run, swim, shake hands, swing a hammer, and to otherwise manipulate your environment. The balance of body muscle consists of smooth and cardiac muscles, which form the bulk of the walls of hollow organs and the heart. Smooth and cardiac muscles are involved in the transport of materials within the body.

Study activities in this chapter deal with microscopic and gross structure of muscle, identification of voluntary muscles, body movements, and important understandings of muscle physiology.

This new edition of this classic perioperative text has addressed changing roles, needs, and evolving technologies while maintaining the fundamental focus that still remains valid: the care of the surgical patient. This edition of the text identifies the knowledge and skill needs of the caregiver and strives to incorporate components of patient care from preoperative, intraoperative, and postoperative practice areas. A systems approach is introduced to help organize patient care to minimize the risk for human error.
