Toxin: poisonous substance naturally produced by certain plants, animals, and bacteria that is capable of causing disease or death in humans; a subgroup of poisons

Introduction

Forensic toxicology helps determine (a) the cause-and-effect relationships between exposure to a drug or other substance and (b) the toxic or lethal effects from that exposure.

People can be exposed to toxic substances:

- intentionally—by treating illness or relieving pain
- accidentally—by harmful combinations or overdoses
- deliberately—by harming or killing others or by committing suicide

Poison—Murder, Accidental Overdoses, and Drug Offences

- Less than 1/2 of 1% of all homicides results from poisoning.
- Accidental drug overdoses are more common.
