Practical Skills in Science Class 09 R.P. Manchanda, Practical Book Online Teaching at Its Best Linda B. Nilson, Ludwika A. Goodson, 2017-11-08. Bring pedagogy and cognitive science to online learning environments. Online Teaching at Its Best: A Merger of Instructional Design with Teaching and Learning Research is the scholarly resource for online learning that faculty, instructional designers, and administrators have long been awaiting. Over 70 percent of degree-granting institutions offer online classes, and while technical resources abound, the courses often fall short of integrating the best practices in online pedagogy, even if they comply with online course design standards. Typically, these standards omit the best practices in teaching and learning and the principles from cognitive science, leaving students struggling to keep the pace, understand the material, and fulfill their true potential as learners. This book fills the gap, providing evidence-based practices for online teaching, online course design, and online student motivation, integrated with pedagogical and cognitive science to help you build the distance learning courses and programs your students deserve. As more and more students opt for distance learning, it's up to designers and instructors to rethink traditional methods and learn to work more effectively within the online learning environment, and up to administrators to provide the needed leadership. Online Teaching at Its Best provides practical, real-world advice grounded in educational science to help online instructors, instructional designers, and administrators deliver an exceptional learning experience. Adopt new pedagogical techniques designed specifically for online learning environments. Ensure strong course alignment and effective student learning for online classes. Increase student retention, build necessary support structures, and train faculty more effectively. Integrate research-based course design and cognitive psychology into graduate or undergraduate programs. Distance is no barrier to a great education; what do stand in the way are inadequate online course design and implementation, and deficient faculty training and support, all of which administrators can mitigate. Online Teaching at Its Best will help you ensure that your online classes measure up to the rigor and quality of excellence in teaching and assessment, build in the personal touch for developing a learning community, and equip your students to succeed in the next challenge.

Lithium Metal Anodes and Rechargeable Lithium Metal Batteries Ji-Guang Zhang, Wu Xu, Wesley A. Henderson, 2016-10-06 This book provides comprehensive coverage of Lithium Li metal anodes for rechargeable batteries Li is an ideal anode material for rechargeable batteries due to its extremely high theoretical specific capacity 3860 mAh g⁻¹ low density 0.59 g cm⁻³ and the lowest negative electrochemical potential 3.040 V vs standard hydrogen electrode Unfortunately uncontrollable dendritic Li growth and limited Coulombic efficiency during Li deposition stripping inherent in these batteries have prevented their practical applications over the past 40 years With the emergence of

post Li-ion batteries safe and efficient operation of Li metal anodes has become an enabling technology which may determine the fate of several promising candidates for the next generation energy storage systems including rechargeable Li-air batteries, Li-S batteries and Li metal batteries which utilize intercalation compounds as cathodes. In this work various factors that affect the morphology and Coulombic efficiency of Li anodes are analyzed. The authors also present the technologies utilized to characterize the morphology of Li deposition and the results obtained by modeling of Li dendrite growth. Finally, recent developments especially the new approaches that enable safe and efficient operation of Li metal anodes at high current densities are reviewed. The urgent need and perspectives in this field are also discussed. The fundamental understanding and approaches presented in this work will be critical for the application of Li metal anodes. The general principles and approaches can also be used in other metal electrodes and general electrochemical deposition of metal films.

Statistical Rethinking Richard McElreath, 2016-01-05. *Statistical Rethinking: A Bayesian Course with Examples in R and Stan* builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. **Web Resource:** The book is accompanied by an R package, *rethinking*, that is available on the author's website and GitHub. The two core functions, `map` and `map2stan`, of this package allow a variety of statistical models to be constructed from standard model formulas.
