Description

Is children's language acquisition based on innate linguistic structures or built from cognitive and communicative skills? This book summarises the major theoretical debates in all of the core domains of child language acquisition research (phonology, word-learning, inflectional morphology, syntax and binding) and includes a complete introduction to the two major contrasting theoretical approaches: generativist and constructivist. For each debate, the predictions of the competing accounts are closely and even-handedly evaluated against the empirical data. The result is an evidence-based review of the central issues in language acquisition research that will constitute a valuable resource for students, teachers, course-builders and researchers alike.

Cognitive Aphasiology - A Usage-Based Approach to Language in Aphasia Rachel Hatchard, 2021-10-15 Aphasia is the most common acquired language disorder in adults, resulting from brain damage, usually stroke. This book firstly explains how aphasia research and clinical practice remain heavily influenced by rule-based generative theory and summarizes key shortcomings with this approach. Crucially, it demonstrates how an alternative, the constructivist usage-based approach, can provide a more plausible theoretical perspective for characterizing language in aphasia. After detailing rigorous transcription and segmentation methods, it presents constructivist usage-based analyses of spontaneous speech from people with various aphasia types, challenging a clear-cut distinction between lexis and grammar, emphasizing the need to consider whole-form storage and frequency effects beyond single words, and indicating that individuals fall along a continuum of spoken language capability rather than differing categorically by aphasia type. It provides original insight into aphasia with wide-reaching implications for clinical practice while equally highlighting how the study of aphasia is important for the development of Cognitive Linguistics.

Morphological Processing and Literacy Development Rachel Berthiaume, Daniel Daigle, Alain Desrochers, 2018-03-28 Synthesizing a range of studies on morphological processing from the past 30 years, this edited collection presents the current state of knowledge on morphological processing and defines classroom practices to help students conceptualise the role of morphology in reading, spelling, and vocabulary development. Research has increasingly indicated the importance of morphological tasks in relation to reading, spelling, and vocabulary acquisition in the classroom. Chapter authors present the theoretical considerations guiding morphological processing research to date, address the use of morphology with reference to different populations of learners, and propose effective and innovative instructional strategies for integrating morphology in the classroom.
