However this new phase of AI evolution is distinct. Capable of enhanced ability these new generative AI systems could easily discern the intuitive needs of their end users. With a mere command or a simple image generative AI systems can draft comprehensive reports, write legal documents or produce intricate visual masterpieces. Their proficiency can also be extended to routine and mundane tasks smoothly managing administrative duties, writing correspondences and providing invaluable support in professional settings. Although these foundation models require a vast amount of training data and billions of parameters to be effective the outcomes are equally remarkable. Technology companies and investors recognising the potential embarked on an investment spree steering a new era for the development of specialised models such as Microsoft CoPilot, Midjourney, ChatGPT and so on. As these technology companies continue to improve their language models each version seems to be more refined than its predecessor. Foremost among these are the Large Language Models (LLMs) emblematic of this AI renaissance. Now with voice activated capabilities generative AIs have become capable of much more in the relatively short span of their existence. With the integration of voice activated features combined with their capabilities to speak like a human being their potential continues to grow exponentially. They aren't labelled as chatbots anymore these AI systems signify a technological paradigm shift reshaping humanity's understanding of technology, automation and creative expression. However with such shift comes the imperative need for governance and control. The unchecked expansion of AI poses unmitigated challenges. In reality these advanced AIs have the potential to be transformative and destructive parallelly. Thus it is necessary to establish guidelines and oversight to ensure the ethical deployment of such systems which this book focuses on. As society stands at this transformative crossroads parallels are being drawn to the imaginative world of fiction. The concept of Jarvis AI from the fictitious world appears provocatively close to becoming a reality. The epoch of generative AI has truly dawned promising a future where technological prowess and human aspiration unite.

Principles of Strategic Communication Derina Holtzhausen, Jami Fullerton, Bobbi Kay Lewis, 2025-10-31.
