## **A Handbook On Food Packaging:**

A Handbook of Food Packaging Frank A. Paine, Heather Y. Paine, 2012-12-06 This is the second edition of a successful title first published in 1983 and now therefore a decade out of date The authors consider the development of the right package for a particular food in a particular market from the point of view of the food technologist the packaging engineer and those concerned with marketing While the original format has been retained the contents have been thoroughly revised to take account of the considerable advances made in recent years in the techniques of food processing packaging and distribution While efficient packaging is even more a necessity for every kind of food whether fresh or processed and is an essential link between the food producer and the consumer the emphasis on its several functions has changed Its basic function is to identify the product and ensure that it travels safely through the distribution system to the consumer Packaging designed and constructed solely for this purpose adds little or nothing to the value of the product merely preserving farm or processor freshness or preventing physical damage and cost effectiveness is the sole criterion for success If however the packaging facilitates the use of the product is reusable or has an after use some extra value can be added to justify the extra cost and promote sales Many examples of packaging providing such extra value can be cited over the last decade

*Packaging of Pharmaceuticals and Healthcare Products* Frank A. Paine, H. Lockhart, 2012-12-06 As was the case with Charles Ross's *Packaging of Pharmaceuticals* published by the UK Institute of Packaging in 1975, it is assumed that the reader of this book already has a broad understanding of the basics of packaging. If not, the *Packaging Users Handbook* and the *Handbook of Food Packaging* are recommended. The packaging needs of pharmaceuticals are different in degree only from those of other perishable products such as processed foods. Because the required action of a medication can be nullified by any deterioration in its active principles, the protection required from its packaging is at least an order of magnitude greater than that needed by foods, for example. Functional efficiency is therefore of prime importance. Conversely, the need for the packaging to sell the medication is much less, hence the graphics required need only provide the right image for the product when presented for use in hospital or surgery. Even when on sale at the pharmacy, the appeal required is that of providing hygiene and confidence more than anything else. Thus the textual requirements are paramount, including traceability, batch numbers, date coding, etc. in case of recall, while striking appearance to attract customer attention is in lower key. And with the increase in malicious tampering nowadays, recall is more frequent.

**Handbook of Food Science and Technology 2** Romain Jeantet, Thomas Croguennec, Pierre Schuck, Gérard Brule, 2016-03-03 This book is a source of basic and advanced knowledge in food science for students or professionals in the food science sector, but it is also accessible for people interested in the different aspects concerning raw material stabilisation and transformation in food products. It is an updated and translated version of the book *Science des aliments* published in 2006 by Lavoisier. *Science des aliments* is a general and introductory food science and technology handbook based on the authors' Masters and PhD courses and research experiences. The book is concise, pedagogical and informative and contains numerous illustrations, approximately 500 original figures and tables.
