A New Framework Of Optimizing Keyword Weights:

A New Framework of Optimizing Keyword Weights in Text Categorization and Record Querying, 2008 In text mining research the Vector Space Model VSM has been commonly used to represent text documents as a vector where each component is associated with a particular word in the documents Assigning appropriate keyword weights in VSM has been critical in Information Retrieval IR and Text Categorization TC Traditionally keyword weighting processes are unsupervised that is the knowledge of document s category is not leveraged to label the documents Typically each keyword weight is assigned using the term frequency inverse document frequency TFIDF measure Although the TFIDF measure has been proven effective in several text mining problems it might not give the optimal classification power for IR and TC In this thesis we propose a new optimization framework to find the best keyword weights based on the proposed inter class and intra class similarity concept The optimal keyword weight can be viewed as the feature space projection where documents from the same category are best clustered together and separated from other categories Subsequently the category average centroid classification is employed to categorize text documents The proposed approach is tested on two practical applications record query and text categorization The record query application is slightly different from traditional IR problems as the goal is to find correlated duplicate and master text records This problem was initiated by a telecommunication company where service engineers attempt to look for associations of the current defect problem in previously recorded problems in the database Extensive experiments demonstrate that the proposed framework significantly improves the classification accuracy and provides balanced performance as measured on all text categories when compared to the standard TFIDF search The text categorization application is tested on the Reuters news data set which is a gold standard benchmark data set The results show that our framework improves performance for the two applications considered namely Information Retrieval and Text Categorization

Modeling a New Computer Framework for Managing Healthcare Organizations Soraia

Oueida, 2020-08-27 The medical sector has been growing exponentially over the last decade and healthcare services are becoming more complex and costly In order to continue efficiently and effectively managing patient safety quality and the effectiveness of the healthcare systems new methodologies are needed This book provides a platform to address this growing need and to improve practice With the introduction of a new computer platform package for the management of medical organizations and healthcare systems Modeling a New Computer Framework for Managing Healthcare Organizations aims to improve management techniques and increase overall satisfaction scores of patients owners and medical resources The platform outlined will improve the daily operation of a healthcare system focusing on the emergency department and can be used to study the operation flow of a unit for performance optimization It offers a user friendly interface and proposed programming language along with a visual and simple practice to collect and understand statistical outputs Essential reading for decision makers on different levels in the healthcare organization hierarchy this book can also be used by management to

improve the performance of the organization and decision makers to hire resources enhance workflows or both It guides designers and system implementers in a step by step approach to make optimal decisions for resource allocation and helps designers and management to detect deficiencies in ongoing processes and fix or enhance them Soraia Oueida is an instructor in the Department of Computer Engineering at the American University of the Middle East She is an IEEE member and her research interests include Simulation Modeling Discrete Mathematics Petri Net Workflows Blockchain IoT Industrial Management Systems

The Proceedings of 2025 Annual National Conference of Electrical Theory and New Technologies Guizhi Xu,Xinjie Yu,2026-02-10 This book presents the proceedings of a distinguished academic conference in the field of electrical engineering held annually in China for ten consecutive sessions Recognized as a leading forum for scholarly exchange the conference consistently attracts contributions that reflect the forefront of research innovation and technological advancement in electrical engineering The collected papers in this book encompass a broad spectrum of topics including but not limited to electromagnetic fields electrical circuits electromagnetic measurement electromagnetic compatibility wireless power transfer and biological electromagnetic technologies These subjects represent critical areas of inquiry that intersect with numerous emerging and established technological domains The primary aim of this book is to provide an interdisciplinary platform for researchers engineers academics and industry professionals to share pioneering work and explore collaborative solutions By integrating perspectives from diverse disciplines the proceedings offer valuable insights into the evolving landscape of electrical engineering research and its practical applications This book serves not only as a comprehensive reference for professionals in the field but also as a rich resource for graduate students and early career researchers seeking to deepen their understanding of current methodologies and future directions Through its curated content the book contributes meaningfully to the ongoing dialogue in electrical engineering and supports the advancement of knowledge across academia and industry
