

## Chapter 18

# CARGO TRANSFER EQUIPMENT

This Chapter provides legal and safety requirements to cover the construction, testing, use and repair. The use of equipment is described together with recommendations regarding its operation, maintenance, inspection and repair. It is intended to assist engineers and inspectors. The equipment will provide a safe and effective method for cargo transfer to cargo.

### 18.1 Metal Cargo Arms

#### 18.1.1 Operating Envelope

All metal cargo arms have a designed operating envelope, which takes into account the following:

- Range of water distribution
- Maximum and minimum strengths of the largest and smallest beams to which the arms are designed
- Maximum and minimum overhead clearance from the deck edge
- Limits for changes in horizontal position due to wind and heaving
- Maximum and minimum loading after operating with other arms in a bay

The limits of the operating envelope should be thoroughly understood by both operators. Most arm configurations should have a visual indication of the operating envelope unless the operator will always be in close proximity to the arm.

The person in charge of operations on a boat should ensure that the factory markings are kept within the operating envelope during all stages of loading and offloading operations. To achieve this, the hook may be required to adjust or detach. (See also Section 14.3)

#### 18.1.2 Fixtures on Manifold

Most metal cargo arms are counterbalanced so that no weight, other than that of the liquid content of the arm, is placed on the manifold. Because the weight of oil in the arms can be considerable (particularly for larger diameter arms), it may be advisable for this weight to be reduced by a support or jacks provided by the manifold.

Some arms have integral jacks that are also used to avoid counterbalancing of the hook by reducing the weight of the arm or other internal forces such as the arm.
