Each two to four page entry is detailed with facts gathered from popular magazines, academic periodicals, books, annual reports, and the archives of the companies themselves. Information is also provided about founders, expansions, and losses, and labour management actions. Proceedings of the 12th Reinventing Space Conference Scott Hatton, 2016-12-25 The proceedings of the 2014 Reinventing Space conference present a number of questions in the context of a constantly innovating space industry from addressing the future of global cooperation, investigating the impact of cuts in US government spending on the private space sector, and probing the overall future of the commercial launch sector. Space tourism and new technology promise the revival of interest in space development. The Apollo Era was the first period of intense space activity and growth. The need to create dramatically lower cost, responsive, and reliable launch systems and spacecraft has never been more vital. Advances in technology are allowing smaller and cheaper satellites to be orbited, from cubesats to nanosatellites to femtosatellites. Thanks to more efficient new launch possibilities, low cost access to space is becoming ever more achievable. Commercial companies and countries are targeting the industry with new funding. Organised by the British Interplanetary Society, the presentations at this conference thoroughly address these challenges and opportunities.

Low Earth Orbit Satellite Design George Sebestyen, Steve Fujikawa, Nicholas Galassi, Alex Chuchra, 2018-02-06 In recent decades, the number of satellites being built and launched into Earth's orbit has grown immensely alongside the field of space engineering itself. This book offers an in-depth guide to engineers and professionals seeking to understand the technologies behind Low Earth Orbit satellites. With access to special spreadsheets that provide the key equations and relationships needed for mastering spacecraft design, this book gives the growing crop of space engineers and professionals the tools and resources they need to prepare their own LEO satellite designs, which is especially useful for designers of small satellites such as those launched by universities. Each chapter breaks down the various mathematics and principles underlying current spacecraft software and hardware designs.
