Developmental Influences on the Brain

Environmental Influences on the Brain

Developmental influences on the brain include genetic factors, prenatal and perinatal factors, and postnatal factors. Genetic factors play a significant role in brain development, with many neurological disorders having a genetic basis. Prenatal and perinatal factors, such as maternal stress, malnutrition, and exposure to toxins, can also affect brain development. Postnatal factors, including early childhood experiences, social interactions, and environmental stressors, continue to shape the brain's structure and function.
