**ARCHIVED: Pooled JVM in CICS Transaction Server V3** Chris Rayns, George Burgess, Scott Clee, Tom Grieve, John Taylor, Yun Peng Ge, Guo Qiang Li, Qian Zhang, Derek Wen, IBM Redbooks, 2015-06-17 NOTE This book contains information about technologies that have been superseded and it is retained for historical purposes only IBM CICS Transaction Server CICS TS has supported the deployment of Java applications since the 1990s In CICS TS V1.3 1999 IBM introduced the Pooled JVM style of JVM infrastructure within CICS TS This infrastructure was designed to be similar in nature to that which a CICS application developer for a language such as COBOL would be used to It brought the benefits of the new Java language to CICS TS without a dramatic change to the way CICS users thought of core concepts such as re-entrancy and isolation As enterprise usage of Java evolved it began to make more and more use of multi-threaded

environments where isolation was not a desired characteristic. Additionally, technologies such as OSGi (Open Service Gateway Initiative) evolved to overcome some of the original disadvantages of applying Java to an enterprise environment. As such, the limitations of the Pooled JVM approach began to outweigh the benefits. In CICS TS V4.1 (2009), IBM introduced the new JVM server infrastructure in CICS TS as a replacement to the Pooled JVM approach. This JVM server infrastructure provides a much more standard Java environment that makes the writing and porting of Java applications for CICS TS much simpler. In CICS TS V5.1 (2012), support for the old Pooled JVM infrastructure was removed. While there is a relatively simple migration path from Pooled JVM to JVM server applications, should no longer be written to the Pooled JVM infrastructure. There are a number of more recent IBM Redbooks publications covering the replacement JVM server technology, including IBM CICS and the JVM server: *Developing and Deploying Java Applications* (SG24-8038-A), *Software Architect's Guide to New Java Workloads in IBM CICS Transaction Server* (SG24-8225).

Horstmann writes for serious programmers who use Java in production projects and need a deep, practical understanding of the language and API. Throughout, he delivers what you need: most, hundreds of real, non-toy examples revealing the most powerful, effective ways to get the job done. Updated examples reflect the new `var` keyword and take advantage of improvements in the Java API. You'll learn how to use JShell's new `Read-Eval-Print-Loop` (REPL) for more rapid and exploratory development and apply new features of the APIs for streams, input/output, processes, and concurrency. In this first of two volumes, Horstmann offers in-depth coverage of fundamental Java and UI programming, including object-oriented programming, generics, collections, lambda expressions, Swing design, concurrency, and functional programming. If you're an experienced programmer moving to Java SE 9, 10, or 11, there's no better source for expert insight, solutions, and code. Master foundational techniques, idioms, and best practices for writing superior Java code. Efficiently implement encapsulation and inheritance. Use sound principles of object-oriented design. Leverage the full power of objects with interfaces, lambda expressions, and inner classes. Harden programs through effective exception handling and debugging. Write safer, more reusable code with generic programming. Improve performance and efficiency with Java's standard collections. Build cross-platform GUIs with the Swing toolkit. Fully utilize multicore processors with Java's improved concurrency. See *Core Java Volume II: Advanced Features* (Eleventh Edition, ISBN 13-978-0-13-516631-4) for expert coverage of Java 9, 10, and 11 enterprise features, the module system, annotations, networking, security, and advanced UI programming.
