The first of two volumes in the Electronic Design Automation for Integrated Circuits Handbook Second Edition Electronic Design Automation for IC System Design Verification and Testing thoroughly examines system level design microarchitectural design logic verification and testing Chapters contributed by leading experts authoritatively discuss processor modeling and design tools using performance metrics to select microprocessor cores for integrated circuit IC designs design and verification languages digital simulation hardware acceleration and emulation and much more New to This Edition Major updates appearing in the initial phases of the design flow where the level of abstraction keeps rising to support more functionality with lower non recurring engineering NRE costs Significant revisions reflected in the final phases of the design flow where the complexity due to smaller and smaller geometries is compounded by the slow progress of shorter wavelength lithography New coverage of cutting edge applications and approaches realized in the decade since

publication of the previous edition these are illustrated by new chapters on high level synthesis system on chip SoC block based design and back annotating system level models Offering improved depth and modernity Electronic Design Automation for IC System Design Verification and Testing provides a valuable state of the art reference for electronic design automation EDA students researchers and professionals

Generating Hardware Assertion Checkers Marc Boulé, Zeljko Zilic, 2008-06-01 Assertion based design is a powerful new paradigm that is facilitating quality improvement in electronic design Assertions are statements used to describe properties of the design I e design intent that can be included to actively check correctness throughout the design cycle and even the lifecycle of the product With the appearance of two new

languages PSL and SVA assertions have already started to improve verification quality and productivity This is the first book that presents an under the hood view of generating assertion checkers and as such provides a unique and consistent perspective on employing assertions in major areas such as specification verification debugging on line monitoring and design quality improvement SystemVerilog Assertions and Functional Coverage Ashok B. Mehta,2016-05-11 This book provides a hands on application oriented guide to the language and methodology of both SystemVerilog Assertions and SystemVerilog Functional Coverage Readers will benefit from the step by step approach to functional hardware verification using SystemVerilog Assertions and Functional Coverage which will enable them to uncover hidden and hard to find bugs point directly to the source of the bug provide for a clean and easy way to model complex timing checks and objectively answer the question have we functionally verified everything Written by a professional end user of ASIC SoC CPU and FPGA design and Verification this book explains each concept with easy to understand examples simulation logs and applications derived from real projects Readers will be empowered to tackle the modeling of complex checkers for functional verification thereby drastically reducing their time to design and debug This updated second edition addresses the latest functional set released in IEEE 1800 2012 LRM including numerous additional operators and features Additionally many of the Concurrent Assertions Operators explanations are enhanced with the addition of more examples and figures Covers in its entirety the latest IEEE 1800 2012 LRM syntax and semantics Covers both SystemVerilog Assertions and SystemVerilog Functional Coverage language and methodologies Provides practical examples of the what how and why of Assertion Based Verification and Functional Coverage methodologies Explains each concept in a step by step fashion and applies it to a practical real life example Includes 6 practical LABs that enable readers to put in practice the concepts explained in the book **The Power of Assertions in SystemVerilog** Eduard Cerny,Surrendra Dudani,John Havlicek,Dmitry Korchemny,2010-10-22 This book is the result of the deep involvementof the authors in the development of EDA tools SystemVerilog Assertion standardization and many years of practical experience One of the goals of this book is to expose the oral knowhow circulated among design and veri cation engineers which has never been written down in its full extent The book thus contains many practical examples and exercises illustr ing the various concepts and semantics of the assertion language Much attention is given to discussing ef ciency of assertion forms in simulation and formal veri tion We did our best to validate all the examples but there are hundreds of them and not all features could be validated since they have not yet been implemented in EDA tools Therefore we will be grateful to readers for pointing to us any needed corrections The book is written in a way that we believe serves well both the users of SystemVerilog assertions in simulation and also those who practice formal v i cation model checking Compared to previous books covering SystemVerilog assertions we include in detail the most recent features that appeared in the IEEE 1800 2009 SystemVerilog Standard in particular the new encapsulation construct checker and checker libraries Linear Temporal Logic operators semantics and usage in formal veri cation However for integral

understanding we present the assertion language and its applications in full detail The book is divided into three parts
