## **A Mind For Numbers:**

A Mind For Numbers Barbara Oakley, PhD, 2014-07-31 The companion book to COURSERA's wildly popular massive open online course Learning How to Learn Whether you are a student struggling to fulfill a math or science requirement or you are embarking on a career change that requires a new skill set A Mind for Numbers offers the tools you need to get a better grasp of that intimidating material Engineering professor Barbara Oakley knows firsthand how it feels to struggle with math She flunked her way through high school math and science courses before enlisting in the army immediately after graduation When she saw how her lack of mathematical and technical savvy severely limited her options both to rise in the military and to explore other careers she returned to school with a newfound determination to retool her brain to master the very subjects that had given her so much trouble throughout her entire life In A Mind for Numbers Dr Oakley lets us in on the secrets to learning effectively secrets that even dedicated and successful students wish they'd known earlier Contrary to popular belief math requires creative as well as analytical thinking Most people think that there's only one way to do a problem when in actuality there are often a number of different solutions you just need the creativity to see them For example there are more than three hundred different known proofs of the Pythagorean Theorem In short studying a problem in a laser focused way until you reach a solution is not an effective way to learn Rather it involves taking the time to step away from a problem and allow the more relaxed and creative part of the brain to take over The learning strategies in this book apply not only to math and science but to any subject in which we struggle We all have what it takes to excel in areas that don't seem to come naturally to us at first and learning them does not have to be as painful as we might think **A**

detailed but easily adaptable plan for process based thinking that readers can apply to any problem in their own lives highlighting the purpose of each step for clarification The next phase of A Mind for Numbers deals with observational thinking or retaining lots of different pieces of data about something we ve experienced Observational thinking is important not only for scientists and mathematicians but also law enforcement officials and those in medicine Duncan takes readers past the basic senses and shows us the depth of a scientists observational prowess displaying the level of detail we should work towards operating The reader sees how all of these sometimes minute pieces of data give him an edge in solving his problem or making a prediction Then we arrive at the educational guess or hypothesis used in scientific thinking Duncan shows readers how to easily formulate a hypothesis and test it to see how close our assertion is Duncan prepares us for repetition of this process just as scientists themselves repeat it sometimes often in order to get to a solution This version of A Mind for Numbers includes a bonus chapter on making solid predictions about just about anything DUncan shows us how to incorporate all of the steps of the scientific method of thinking into the prediction making process Here the observation of experience is especially important and Duncan explains why DUncan also includes brainstorming methods that can bring with them breakthrough ideas perfect for someone looking to make their mark in science engineering writing and business Limited Edition *Encyclopædia of Religion and Ethics: Mundas-Phrygians* James Hastings,John Alexander Selbie,1917
