Cameron Trivedi Microeconometrics Using Stata Revised Edition:

Microeconometrics Using Stata Adrian Colin Cameron, Pravin K. Trivedi, 2009 This outstanding introduction to microeconometrics research using Stata offers the most complete and up to date survey of methods available The authors address each topic with an in depth example and demonstrate how to use Stata s programming features to implement methods for which the application does not have a specific command

Applied Microeconometrics Using Stata Adrian Colin Cameron, Pravin K. Trivedi, 2008-12-15 Covering important topics omitted from basic introductions to Stata Microeconometrics Using Stata shows how to do microeconomic research using Stata It provides the most complete and up to date survey of microeconomic methods available in Stata After a brief introduction to Stata the authors present linear regression simulation and generalized least squares methods The section on cross sectional techniques is complete with up to date treatments of instrumental variables methods for linear models as well as quantile regression methods The next section covers estimators for the parameters of linear panel data models The book explores standard random effects and fixed effects methods along with mixed linear models used in many areas outside of econometrics After introducing methods for nonlinear regression models the authors discuss how to code new nonlinear estimators in Stata They show how to easily implement new nonlinear estimators The authors also cover inference using analytical and bootstrap approximations to the distribution of test statistics The book then contains a section on methods for different nonlinear models including multinomial selection count data and nonlinear panel data models By combining intuitive introductions and detailed discussions of Stata examples this book provides an invaluable hands on introduction to microeconometrics

Applied Health Economics Andrew M. Jones, Nigel Rice, Teresa Bago d'Uva, Silvia Balia, 2013-05-07 The first edition of Applied Health Economics did an expert job of showing how the availability of large scale data sets and the rapid advancement of advanced econometric techniques can help health economists and health professionals make sense of information better than ever before This second edition has been revised and updated throughout and includes a new chapter on the description and modelling of individual health care costs thus broadening the book s readership to those working on risk adjustment and health technology appraisal The text also fully reflects the very latest advances in the health economics field and the key journal literature Large scale survey datasets in particular complex survey designs such as panel data provide a rich source of information for health economists They offer the scope to control for individual heterogeneity and to model the dynamics of individual behaviour However the measures of outcome used in health economics are often qualitative or categorical These create special problems for estimating econometric models The dramatic growth in computing power over recent years has been accompanied by the development of methods that help to solve these problems The purpose of this book is to provide a practical guide to the skills required to put these techniques into practice Practical applications of the methods are illustrated using data on health from the British Health and Lifestyle Survey HALS the British Household Panel Survey BHPS

the European Community Household Panel ECHP the US Medical Expenditure Panel Survey MEPS and Survey of Health Ageing and Retirement in Europe SHARE There is a strong emphasis on applied work illustrating the use of relevant computer software with code provided for Stata Familiarity with the basic syntax and structure of Stata is assumed The Stata code and extracts from the statistical output are embedded directly in the main text and explained at regular intervals The book is built around empirical case studies rather than general theory and the emphasis is on learning by example It presents a detailed dissection of methods and results of some recent research papers written by the authors and their colleagues Relevant methods are presented alongside the Stata code that can be used to implement them and the empirical results are discussed at each stage This text brings together the theory and application of health economics and econometrics and will be a valuable reference for applied economists and students of health economics and applied econometrics
