A Practical Guide to Bio-inspired Design Helena Hashemi Farzaneh,Udo Lindemann,2018-07-12 Bio inspired design also called biomimetics or biomimicry is a promising approach for the development of innovative technical products not only in mechanical engineering but also in areas such as material science and even computer engineering Innovations such as humanoid robots or multifunctional materials have shown the potential of bio inspired design However in industrial companies bio inspired design remains an exotic approach which is rarely used in innovation practice One reason for this is a lack of knowledge on how to implement bio inspired design in practice Therefore this guide book was written to explain the application of bio inspired design methods and tools The target groups are professional engineers and biologists as well as students of both disciplines The book presents a selection of methods for specific activities in bio inspired design namely planning a bio inspired design project abstraction search analysis and comparison and transfer of analogies Factsheets give an overview of each method its advantages and challenges and its suitability for different bio inspired design approaches and scenarios To facilitate understanding all methods are explained with the help of the same example In addition ten best practice examples show the practical applicability of bio inspired design

Biochemical Adaptation Peter W. Hochachka,George N. Somero,2002-01-17 The study of biochemical adaptation provides fascinating insights into how organisms work and how they evolve to sustain physiological function under a vast array of environmental conditions This book describes how the abilities of organisms to thrive in widely different environments derive from two fundamental classes of biochemical adaptations modifications of core biochemical processes that allow a common set of physiological functions to be conserved and inventions of new biochemical traits that allow entry into novel habitats Biochemical Adaptation Mechanisms and Process in Physiological Evolution asks two primary questions First how have the core biochemical systems found in all species been adaptively modified to allow the same fundamental types of physiological processes to be sustained throughout the wide range of habitat conditions found in the biosphere Second through what types of genetic and biochemical processes have new physiological functions been fabricated The primary audience for this book is faculty senior undergraduates and graduate students in environmental biology comparative physiology and marine biology Other likely readers include workers in governmental laboratories concerned with environmental issues medical students interested in some elements of the book and medical researchers
