Cannabis Processing For The Cbd Terpenes:

Food and Immunity: Tackling the Diseases of the 21st Century Subhash C. Chauhan, Shivraj Hariram Nile, Ujjawal Sharma, 2025-10-28 Over the past few decades scientific research has shed light on the strong connection between food and immunity. It has become evident that our dietary choices significantly influence the strength and effectiveness of our immune system. A diet rich in essential nutrients, vitamins, minerals, and antioxidants can bolster the body's defense mechanisms, whereas a poor diet can compromise its ability to fight off infections and diseases. For instance, processed foods high in refined sugars, unhealthy fats, and additives have become prevalent in modern diets, contributing to obesity, inflammation, and chronic diseases. Additionally, the overconsumption of highly processed foods has been linked to the destruction of beneficial gut bacteria, which plays a crucial role in regulating the immune system. On the other hand, a diet that includes a wide variety of fruits, vegetables, whole grains, lean proteins, and healthy fats provides the necessary nutrients to support the immune system's functions. The goal of this Research Topic, **Food and Immunity: Tackling the Diseases of the 21st Century**, is to explore the intricate relationship between nutrition, immune function, and the prevention of non-communicable diseases. We aim to provide a comprehensive understanding of how dietary choices impact the human immune system and contribute to the rising burden of non-communicable diseases in the 21st century. By collating cutting-edge research, expert insights, and evidence-based studies, we seek to highlight the significance of a balanced and nutrient-rich diet in bolstering immune defenses and mitigating the risks of chronic illnesses. Ultimately, this will raise awareness among healthcare professionals, policymakers, and the general public, encouraging them to make informed dietary decisions that will foster better health outcomes and enhance global efforts in combatting the diseases of our time. This Research Topic is associated with the International Conference held on 5th August 2023 by Research and Innovation Support for Higher Impact RISHI. It welcomes researchers, scientists, nutritionists, and healthcare professionals to contribute their original research, review articles, and case studies that explore the intricate relationship between nutrition and immune function in relation to the treatment and prevention of non-communicable diseases. Topics of interest include but are not limited to: Impact of specific nutrients (e.g., vitamins, minerals, antioxidants) on immune system function and health; Role of gut microbiota in immune modulation; Effect of various dietary patterns (e.g., Mediterranean diet, plant-based diets) on immune responses; Role of intermittent fasting on immunity; Evaluation of the immune-boosting potential of functional foods and nutraceuticals; Assessing the link between obesity, inflammation, and immune system dysfunction; Immune-related health disparities and the influence of dietary habits on vulnerable populations; Studies on the impact of food processing and preservation techniques on the nutritional value of foods and their immune benefits; Clinical trials and intervention studies focusing on dietary interventions to improve immune function and combat non-communicable diseases; Public health strategies and policies aimed at promoting better nutrition and immune health.
