Shaun R. Opie,2021-03-09 The legislative requirement for cannabis to undergo laboratory testing has followed legalization of medical and recreational use in every U S state to date Cannabis safety testing is a new investment opportunity within the emerging cannabis market that is separate from cultivation processing and distribution allowing individuals and organizations who may have been reluctant to enter previously a new entry route to the cannabis space However many of the costs timelines operational requirements and compliance issues are overlooked by people who have not been exposed to regulated laboratory testing Cannabis Laboratory Fundamentals provides an in depth review of the key issues that impact cannabis testing laboratories and provides recommendations and solutions to avoid common but expensive mistakes The text goes beyond methodology to include sections on economics regulation and operational challenges making it useful for both new and experienced cannabis laboratory operators as well as all those who want to understand the opportunities and risks of this industry

other organisms Wetlands globally are under high pressure due to anthropogenic activities as well as climate change Changes of land use as well as altered hydrology due to climate change will lead to disturbance and loss of these habitats However the diversity and functioning of microbial communities in wetlands systems is highly underexplored in comparison to soils and aquatic ecosystems Given the importance of wetlands and their immediate threats combined with the lack of knowledge on the microbiology of these systems is the basis for this special issue focusing on the current microbiological knowledge and gaps therein to be assessed in future wetland research Papers research papers reviews perspectives opinion papers are welcomed that focus on all aspects that regulate the functioning and community composition of microbes i e bacteria archaea protozoa fungi in wetland ecosystems peat coastal as well as freshwater marshes flood plains rice paddies littoral zones of lakes etc from all geographic regions Welcomed topics are physiology ecology functioning biodiversity biogeography of microbes involved in nutrient cycling C N P Fe Mn green house gas emissions as well as plant microbe interactions These studies can be multidisciplinary and cover topics from the molecular to the community level
